

Comprenez-vous vraiment la cavité péritonéale ?

Chez les femmes,
la cavité abdominale (péritonéale)
communique avec l'extérieur.

The continuous lining of the abdominal walls by the parietal peritoneum forms a sac. This sac is closed in men but has two openings in women where the uterine tubes provide a passage to the outside. The closed sac in men and the semiclosed sac in women is called the peritoneal cavity.

Le système génital masculin
n'a pas d'ouverture dans la
cavité péritonéale.
