

Format of the oral exam

Will take place on Thursday 30.01.2025 from 08h15 to 18h15 (AAC020)

- The format of this oral exam will be as follows:
 - 1) You will randomly select two (sub-)chapters of the course. Then you will have the possibility to select one, the other or both (sub-)chapters. I will then ask you questions in relation with your selection.
 - 2) There will be no preparation.
 - 3) No documents (slides, notes, etc.) are allowed during the oral exam.
 - 4) About 20 minutes are allocated for the oral exam.
- You are not supposed to learn by heart "complex" expressions (such as the radiative transport equation, etc). However, the various definitions, classifications, "mechanisms" and orders of magnitudes discussed during the course are important.
- The exam schedule and a selection of slides considered as important are going to be available on Moodle.
