

SR-2024 - Ex-Session 4: Transition-metal catalysis in organic synthesis

Exercise 1

What is the structure of **A**?

Propose a detailed mechanism for each step.

What is the name of the second reaction?

Exercise 2

Propose a detailed mechanism for this cyclization reaction, comprising two consecutive individual steps, which also explains the observed relative stereochemistry.

What is the name for this type of reaction?

Exercise 3

Propose a mechanism for this reaction, showing the major intermediates and elemental steps.
