

By the end of the semester, all students who would like to receive course credits, must have handed in their report (that meets the following aspects) via this Moodle course site:

Page limit: one page of A4 document

Document format: PDF

Required content:

- 1) state which particular seminar (among all those you participated in) you liked the best and why
- 2) briefly discuss specific data sets / outcomes within the context of your one most favorite seminar (e.g., particular experiment design, methods / controls deployed, etc.)
- 3) please try to bring in as much as possible your own personal critiques / critical evaluations to the specific seminar that you are writing about in your report

PS. we always try to cover a broad range of latest science in the field through these seminars, but if you feel we have missed some topics over the recent years, please do include some recommendations - we'll try the best we can to accommodate your suggestions

We look forward to reading your reports in due course.
