

Presentation template

Master's degree in environmental science and engineering

Occupational and environmental health

Oral presentations should be concise (10-15 min) should and address the following questions.

1. Hazard identification
what hazards are present in this situation, what health risks are possible (with what degree of evidence)?
2. Background information
Briefly explain the specific context of this situation. What protective/aggravating factors likely to affect risk are present (and why)?
3. Risk assessment
Is the risk high or low? Is there any data on accidents/illnesses in these situations?
4. Relevant regulations
Are there any legal provisions or rules of good practice that apply to this situation? What are they?
5. Recommendations
what do you recommend? What prevention and protection measures do you think are appropriate?
