

Paper 2 – Discussion

ME-426 – Micro/Nanomechanical Devices

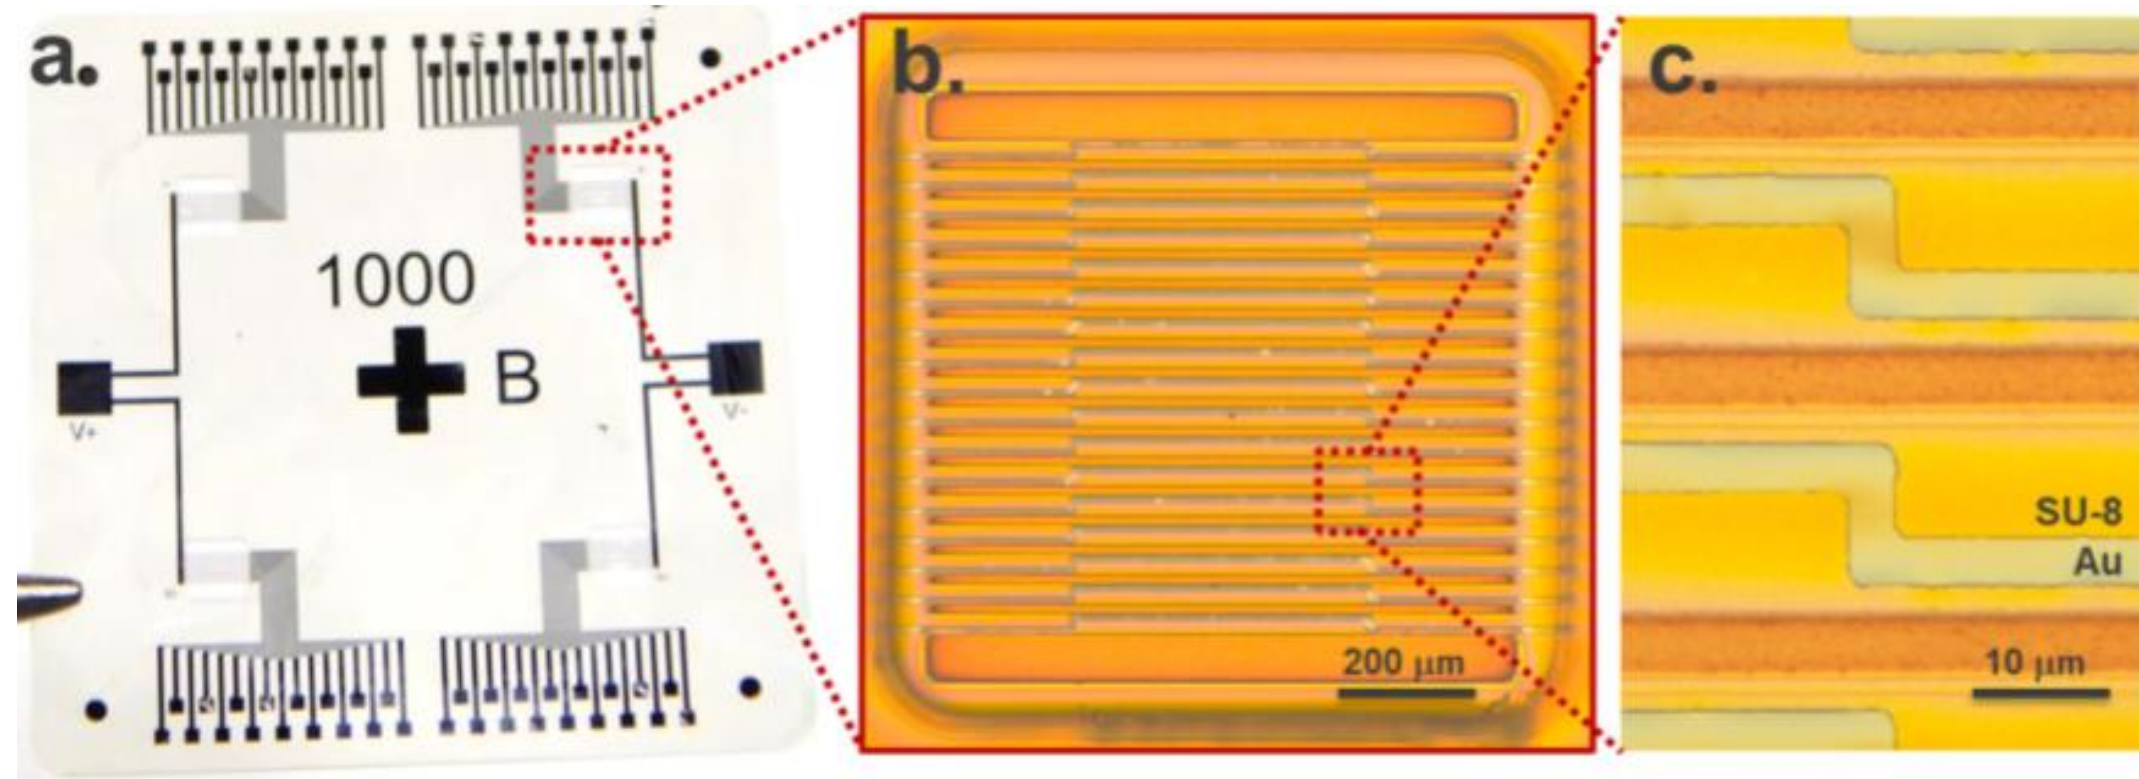

Prof. Guillermo Villanueva

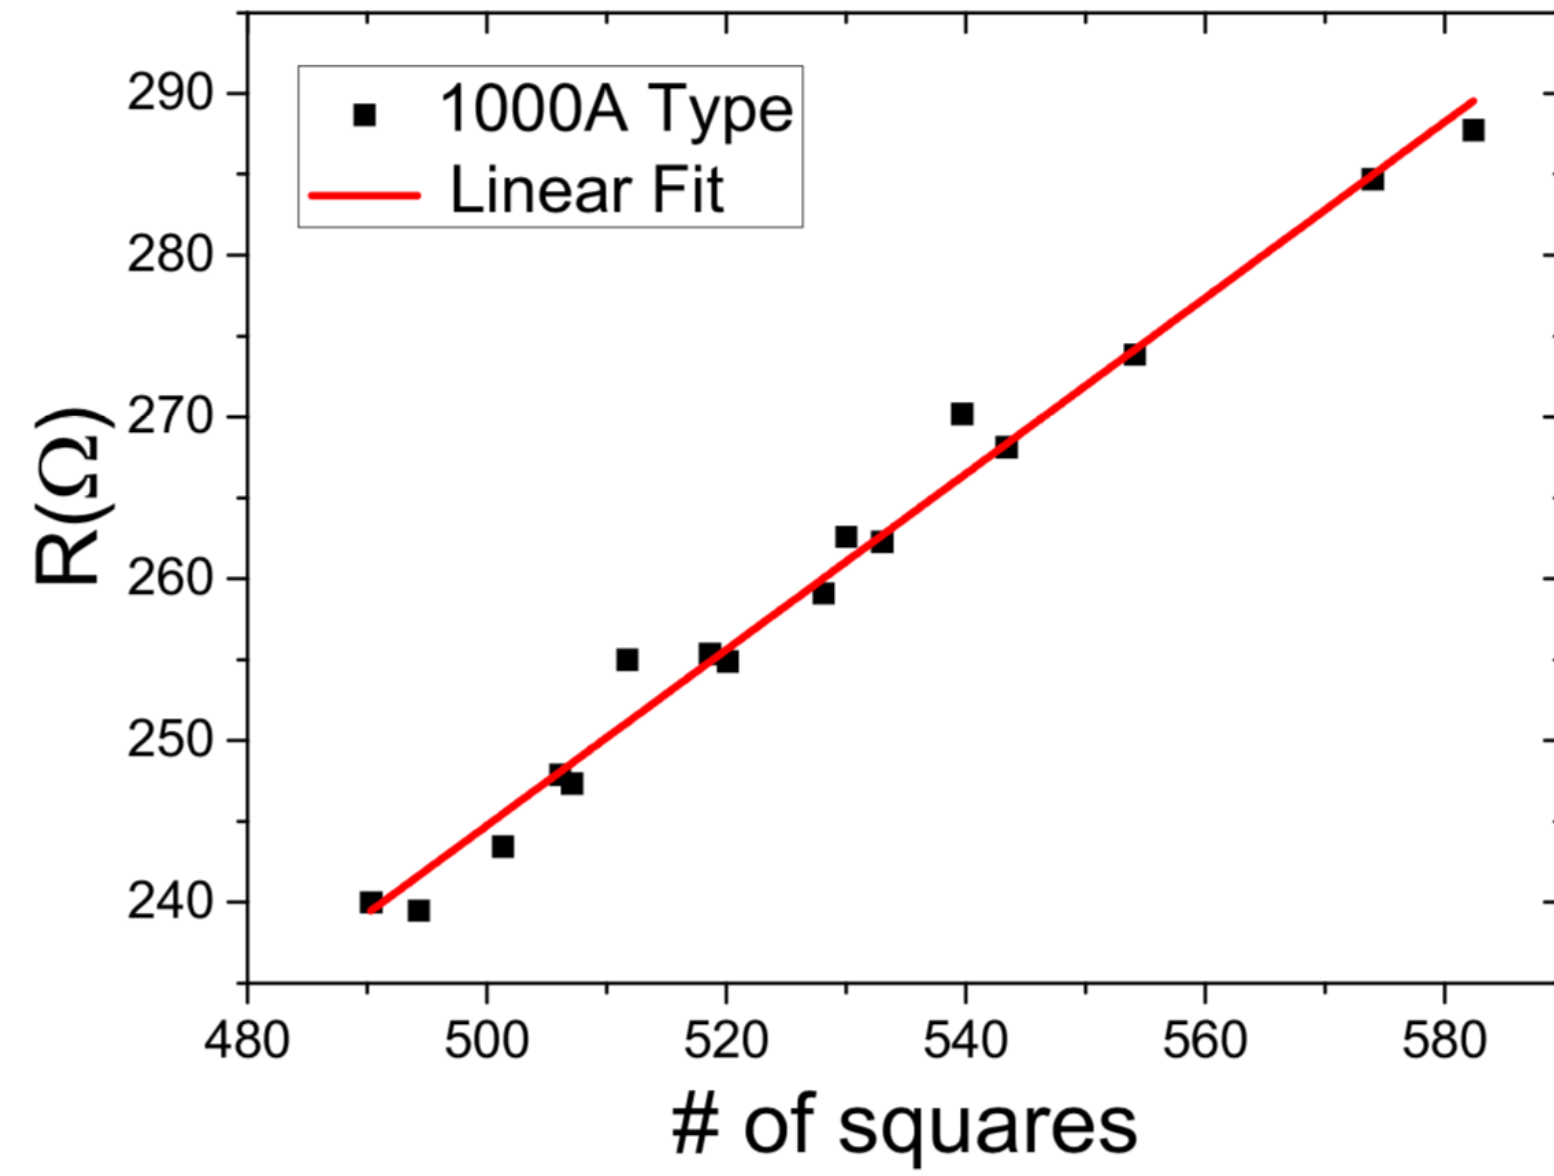

- How are the devices made?
- What is the copper for?
- Why are there differences in the dimensions?
- Why are there several layers of polymer?
- Why using gold?
- Why is the metal in that shape? Can this shape make the beams more fragile?
- What is bandwidth and why is it important?
- What is the square resistance?
- Why are the beams collapsing?
