- Remarks
- [6 remarque(s)]
- De la peine à suivre la structure des séances d'exercices. Donc assez dur d'assimiler comme il faut toute la matière

For now the course is quit challenging. A few more reminder on the basic theory like De Broglie and so on would have been nice. Sometimes I feel I miss some notions to understand what's going on. And having the solution of the exercices in order to take notes on it durind the 1pm session would be nice.

Professeur incroyablement intéressant et clair

The course is great. No particular remark yet

This class is a bit less technical than I would have expected, but nonetheless provides a good overview of what technologies exist and when they should be used.

Very interesting course with a great teacher that visibly wants the best for the students and puts in a lot of effort to make the course as accessible as possible. I feel however that covering the maths should take a smaller place for the benefit of really emphasizing on providing the intuition to some new/core concepts.
