

Polymer chemistry and macromolecular engineering

Fall 2024

Summary of Chemical Bond Formation

This is a very short summary of the important bonds being formed during polymerization reactions.

Please refer to the literature for a more detailed mechanism.

Please note the position of the radical in the third line after the attack of the initiator.

Polymer chemistry and macromolecular engineering

Fall 2024

Exercise Chemical Bond Formation

This exercise is about the type of bond that is forming when equimolar ratios are used (=1mol of each component). It is not about polymerization.
