

Project handout instructions and submission deadlines

The deadline for project submission is **January 22nd, 2026 at 23:59h.**

The submission needs to contain all the documents described below: slides, source code, mobile and wear APKs. Optionally, you can also include a short video of your application in action and a readme file.

The code **must** be able to build and run as expected and as described in the Readme file you provide.

For handing out the projects, we require you to follow a specific but simple structure. Create a .zip archive named as **ProjectName_SCIPER1_SCIPER2_SCIPER3.zip**:

1. Add your **presentation**, in any non-exotic file format, such as **.pdf**, **.html**, **.pptx**, **.ppt**.
2. Add the **mobile** and **wear** application files (**.apk**) which are generated in each module's *build/outputs/apk/debug/* folder. To generate APKs in Android Studio, click the **Build** -> **Generate app Bundles or APK(s)** -> **Generate APK(s)** item from the **Build** menu.
3. Add an *extras* folder, containing anything you find relevant (such as *readme.txt* for instructions, back-end server code with which you app interacts with, a video file, etc).
4. Add your project **source code** in a **.zip** file generated by Android Studio, from the **File** -> **"Export to Zip file..."** menu.
5. **Check** on someone else's computer that everything opens, builds and runs as expected.

Figure 1: In blue the files and folders to add, in black the project .apk files.
Names specific to your project are in italic.
