

MSE 423 Fall 2025 – Week 1

WAVE MECHANICS

MSE 423 Fundamentals of Solid-state Materials - Nicola Marzari (EPFL, Fall 2025)

The mechanics of the quantum mechanics class: MSE 423 Team

- Lectures: Tue 11am-1pm, Thu 2pm-3pm – in MXF-1 (for now)
- Exercises: Thu 3pm-4pm – in MXF-1 (for now)
- Office hours: Tue 1pm (ideally email first)

MSE 423 Fundamentals of Solid-state Materials - Nicola Marzari (EPFL, Fall 2025)

A brief history...

Education

- Laurea in Physics (University of Trieste, 1992)
- PhD in Physics (University of Cambridge, 1993-96)
- NSF Postdoc (Rutgers University, 1996-98)
- Research Scientist (Princeton University, 1999-01)

Professional

- Assistant Professor (MIT, 2001-05)
- Associate Professor (MIT, 2005-09)
- Toyota Chair of Materials Engineering (MIT, 2009-11)
- Statutory ("University") Chair of Materials Modelling (U. of Oxford, 2010-11)
- Director, Materials Modelling Laboratory (U. of Oxford, 2010-11)
- Chair, Theory and Simulation of Materials (EPFL, 2011-2026)
- Director, National Centre MARVEL for Materials Design and Discovery (2014-2026)
- Head, Laboratory of Materials Simulations, Paul Scherrer Institut (2021-2026)
- Cavendish Professor of Physics (University of Cambridge, 2025-onwards)

MSE 423 Fundamentals of Solid-state Materials - Nicola Marzari (EPFL, Fall 2025)

Rolf E. Hummel **Textbook**

A couple of useful texts:

- **Mortimer, *Physical Chemistry* (Elsevier, 3rd Ed., 2008)**
- **Rolf E Hummel, *Electronic Properties of Materials*, Springer (2011) (ISBN: 978-1-4419-8163-9 (Print) 978-1-4419-8164-6 (Online))**

The last one is FREE to EPFL students as a PDF at <http://link.springer.com>:
<http://link.springer.com/book/10.1007/978-1-4419-8164-6>

You can purchase a softcover from the same website for 25 CHF (but will not use it overly – relying mostly on readings that I will post).

MSE 423 Fundamentals of Solid-state Materials - Nicola Marzari (EPFL, Fall 2025)

Other (very good) textbooks

- Bransden & Joachain, *Quantum Mechanics* (Prentice Hall, 2nd Ed., 2000)
- Bransden & Joachain, *Physics of Atoms and Molecules* (Prentice Hall, 2nd Ed., 2003)
- Ashcroft and Mermin, *Solid-state physics* (Brooks/Cole, 1976)
- Kittel, *Introduction to solid-state physics* (Wiley, 8th Ed., 2004)

Oxford Masters Series (Oxford University Press)

- Singleton, *Band Theory and Electronic Properties of Solids*
- Fox, *Optical Properties of Solids*
- Dove, *Structure and Dynamics*
- Blundell, *Magnetism in Condensed Matter*

MSE 423 Fundamentals of Solid-state Materials - Nicola Marzari (EPFL, Fall 2025)

Homework (1 exercise per week, not graded) and written exam

- Every Tue: exercise for the following week, and the solution for the current one, uploaded on Moodle
- Every Thu: solution for the current one discussed; you can work on the following one, and ask questions
- **We don't grade the homework.** You do it to understand you master the material.
- We will have a written exam in January – 3 hours, 4 question. Two theory questions, and two exercises. Closed book, you cannot have any material with you. We'll give you at the end of the class a list of the theory questions that could be asked. The exercises will closely follow the ones you did during the semester. If absent (justified) can take a oral exam later.

Advanced materials' research

MSE 423 Fundamentals of Solid-state Materials - Nicola Marzari (EPFL, Fall 2025)

Why do we need quantum mechanics ?

Structural properties (fracture in solids)

MSE 423 Fundamentals of Solid-state Materials - Nicola Marzari (EPFL, Fall 2025)

Electronic, optical, magnetic properties

MSE 423 Fundamentals of Solid-state Materials - Nicola Marzari (EPFL, Fall 2025)

Changing the world...

...for better or for worse

MSE 423 Fundamentals of Solid-state Materials - Nicola Marzari (EPFL, Fall 2025)

A few easy pieces

MSE 423 Fundamentals of Solid-state Materials - Nicola Marzari (EPFL, Fall 2025)

Next time you fly

MSE 423 Fundamentals of Solid-state Materials - Nicola Marzari (EPFL, Fall 2025)

Meet Clara and Fritz

MSE 423 Fundamentals of Solid-state Materials - Nicola Marzari (EPFL, Fall 2025)

Standard Model of Matter

- Atoms are made by **massive, point-like nuclei** (protons+neutrons)
- Surrounded by tightly bound, rigid shells of **core electrons**
- Bound together by a glue of **valence electrons** (gas vs. atomic orbitals)

©2001 How Stuff Works

MSE 423 Fundamentals of Solid-state Materials - Nicola Marzari (EPFL, Fall 2025)

Some energy scales

- An electron in a 1V potential = 1 eV = 1.602×10^{-19} J
- Energy at our living conditions (300 K): **0.04 eV**
(kinetic energy of an atom in an ideal gas).
- Hydrogen bond: **0.29 eV**. Cohesive energy of silicon **4.6 eV/atom**.
Diamond **7.4 eV/atom**.
- Energy of visible light: **1.6-3.1 eV**.
- Binding energy of an electron to a proton (hydrogen):
13.6058 eV = 1 Ry (rydberg) = 0.5 Ha (hartree) = 0.5 atomic units

MSE 423 Fundamentals of Solid-state Materials - Nicola Marzari (EPFL, Fall 2025)

From Classical to Quantum

MSE 423 Fundamentals of Solid-state Materials - Nicola Marzari (EPFL, Fall 2025)

Round Up the Usual Suspects

- Particles and electromagnetic fields
- Forces
- Dynamics

MSE 423 Fundamentals of Solid-state Materials - Nicola Marzari (EPFL, Fall 2025)

Particles

- Electrons
- Nuclei (protons, neutrons)
- What are their equations of motion?

MSE 423 Fundamentals of Solid-state Materials - Nicola Marzari (EPFL, Fall 2025)

Fields

- Electric and magnetic fields
- What are their equations of motion?

*J.C. MAXWELL
~ 1860-1870*

MSE 423 Fundamentals of Solid-state Materials - Nicola Marzari (EPFL, Fall 2025)

Electromagnetic Waves / Photons

$$\underline{E} = h\nu = h \frac{c}{\lambda} = kT$$

h is Planck's constant = $6.626 \cdot 10^{-34}$ J s

c is the speed of light = 299 792 458 m / s

k is Boltzmann's constant = $1.381 \cdot 10^{-23}$ J/K

(also, $1\text{eV} = 1.602176565 \times 10^{-19}$ J)

E is the energy (J), ν is the frequency (1/s), λ the wavelength (m)

THE ELECTROMAGNETIC SPECTRUM

Examples: <http://imagers.gsfc.nasa.gov/ems/ems.html>

MSE 423 Fundamentals of Solid-state Materials - Nicola Marzari (EPFL, Fall 2025)

Forces

- Electromagnetic interactions
- (Gravity, electroweak, strong)

Dynamics of a Particle

$$m \frac{d^2 \vec{r}}{dt^2} = F(\vec{r}) \quad \longrightarrow \quad \begin{array}{l} \vec{r}(t) \\ \vec{v}(t) \end{array}$$

The sum of the kinetic and potential energy ($E=T+V$) is conserved

MSE 423 Fundamentals of Solid-state Materials - Nicola Marzari (EPFL, Fall 2025)

Dynamics of a Particle

$$m \frac{d^2 \vec{r}}{dt^2} = F(\vec{r}) \quad \longrightarrow \quad \begin{array}{l} \vec{r}(t) \\ \vec{v}(t) \end{array}$$

The sum of the kinetic and potential energy ($E=T+V$) is conserved

MSE 423 Fundamentals of Solid-state Materials - Nicola Marzari (EPFL, Fall 2025)

Wave-particle Duality

- Particles have wave-like properties:
 - Quantum mechanics: Electrons in atoms are standing waves – just like the harmonics of an organ pipe
 - Electrons beams can be diffracted, and we can see the fringes (Davisson and Germer, at Bell Labs in 1926...)

MSE 423 Fundamentals of Solid-state Materials - Nicola Marzari (EPFL, Fall 2025)

Wave-particle Duality

- *Waves have particle-like properties:*
 - *Photoelectric effect: quanta (photons) are exchanged discretely*
 - *Energy spectrum of an incandescent body looks like a gas of very hot particles*

MSE 423 Fundamentals of Solid-state Materials - Nicola Marzari (EPFL, Fall 2025)

When is a particle like a wave ?

Wavelength • momentum = Planck

L. DOS BLOCHIF

$$\lambda \cdot p = h$$

$$(h = 6.626 \times 10^{-34} \text{ J s} = 2\pi \text{ a.u.})$$

MSE 423 Fundamentals of Solid-state Materials - Nicola Marzari (EPFL, Fall 2025)

Description of a Wave

The wave is an excitation (a vibration): We need to know the amplitude of the excitation at every point and at every instant

$$\Psi = \Psi(\vec{r}, t)$$

MSE 423 Fundamentals of Solid-state Materials - Nicola Marzari (EPFL, Fall 2025)

MSE 423 Fundamentals of Solid-state Materials - Nicola Marzari (EPFL, Fall 2025)

AROSA (GRAUBÜNDEN/GRISONS), 27th DECEMBER 1925

At the moment I am struggling with a new atomic theory. I am very optimistic about this thing and expect that if I can only... solve it, it will be very beautiful.

Erwin Schrödinger

MSE 423 Fundamentals of Solid-state Materials - Nicola Marzari (EPFL, Fall 2025)

Time-dependent Schrödinger's equation

$\hbar = \frac{h}{2\pi}$ (=1 a.u.) (Newton's 2nd law for quantum objects)

$$-\frac{\hbar^2}{2m} \nabla^2 \Psi(\vec{r}, t) + V(\vec{r}, t) \Psi(\vec{r}, t) = i\hbar \frac{\partial \Psi(\vec{r}, t)}{\partial t}$$

↑ MASS OF e⁻

$\Psi(\vec{r}, t)$

$$\nabla^2 = \frac{\partial^2}{\partial x^2} + \frac{\partial^2}{\partial y^2} + \frac{\partial^2}{\partial z^2}$$

1925-onwards: E. Schrödinger (wave equation), W. Heisenberg (matrix formulation), P.A.M. Dirac (relativistic)

MSE 423 Fundamentals of Solid-state Materials - Nicola Marzari (EPFL, Fall 2025)

Plane waves as free particles

$\Psi(\vec{r}, t) = A \exp[i(\vec{k} \cdot \vec{r} - \omega t)]$ satisfies the wave equation for a free particle

$$-\frac{\hbar^2}{2m} \nabla^2 \Psi(\vec{r}, t) = i\hbar \frac{\partial \Psi(\vec{r}, t)}{\partial t} \quad (\text{provided } E = \hbar\omega = \frac{p^2}{2m} = \frac{\hbar^2 k^2}{2m})$$

$$-\frac{\hbar^2}{2m} \left[\frac{\partial^2}{\partial x^2} + \frac{\partial^2}{\partial y^2} + \frac{\partial^2}{\partial z^2} \right] \left[A e^{i(\vec{k} \cdot \vec{r} - \omega t)} \right] = i\hbar A e^{i(\vec{k} \cdot \vec{r} - \omega t)} \frac{\partial}{\partial t} e^{-i\omega t}$$

$$-\frac{\hbar^2}{2m} \left[(ik_x)^2 e^{i\vec{k} \cdot \vec{r}} + (ik_y)^2 e^{i\vec{k} \cdot \vec{r}} + (ik_z)^2 e^{i\vec{k} \cdot \vec{r}} \right] e^{-i\omega t} = i\hbar (-i\omega) e^{i\vec{k} \cdot \vec{r}} e^{-i\omega t}$$

$$+\frac{\hbar^2}{2m} [k_x^2 + k_y^2 + k_z^2] = i\hbar (+i\omega) = +\hbar\omega$$

MSE 423 Fundamentals of Solid-state Materials - Nicola Marzari (EPFL, Fall 2025)

Plane waves as free particles

$$\int_V d\vec{r} \psi^*(\vec{r}, t) \psi(\vec{r}, t) = 1$$

$$\Psi_{\vec{k}}(\vec{r}, t) = A \exp[i(\vec{k} \cdot \vec{r} - \omega t)]$$

WAVEVECTOR

ANGULAR FREQUENCY

A graph showing the magnitude squared of the wavefunction, $|\psi(\vec{r}, t)|^2$. The curve is a sinusoidal wave. A red square marks a peak, and a blue square marks a trough. Red arrows point from the labels 'WAVEVECTOR' and 'ANGULAR FREQUENCY' to the corresponding terms in the wavefunction equation above.
$$|\psi(\vec{r}, t)|^2$$
