

# Technology Trends Drives The Capsule Endoscopy System In 2015

## Endoscopy procedure

1. Fasting necessary prior to swallowing capsule
2. Capsule glides smoothly through digestive tract
3. Wireless recorder worn on a belt around waist receives signals transmitted by capsule through sensors placed on patient's body
4. Capsule naturally excreted

## Advantages

- Painless
- No sedation
- Provides 3-D, color images of small intestines without surgery
- Allows doctors to make early, accurate diagnosis of problems so they can recommend most appropriate treatment
