THE MAKING OF AN INNOVATIVE MEDICINE

*Introductory workshops on translational biomedical research and drug discovery
and development*

BIO-698 resumes Thursday September 21. 2023
4:15 PM @ AAC 108

Sciences de la Vie -SV

Prof Roger G. Clerc

The Making Of An Innovative Medicine – course schedule

Thursday's @ 4-6 PM except 14.12/21.12.23 @2-6 PM

Session 1: Scope of the course _ general organization _ case study

21.09.23 *Embracing a career at the heart of biomedical research !?*

Session 2: Historical perspective: the modern pharmacy

28.09.23 *Advent of modern medicines - placebo controlled drug development*

Session 3: Introduction to translational research: crossing the bridge

05.10.23 *A chasm has opened wide between biomedical research and patients in need*

Session 4: Therapeutic target identification I & II

12-19.10.23 *“me too” vs a wealth of innovative targets _ small MW cpds vs biologicals*
Early front loading of biomarker identification for cohort stratification

Session 5: Structure based drug design _ medicinal chemistry_low/high throughput

26.10.23 *screening assays_ multiple parallel parameters optimization MDO*
Setting up screening assays, the robotics, the million cpds librairies

Session 6: Therapeutic modalities peptides and biologicals: today's -

02.11.23 *tomorrow's pharmacy NBEs*

Challenges (cost of goods - healthcare payers) and opportunities

WORKSHOP LISTING - THE MAKING OF AN INNOVATIVE MEDICINE BIO698

Workshops _ The Making Of An Innovative Medicine

(non exhaustive listing)

- Historical perspectives : the early days of modern pharmacy : *Hopping on giant shoulders*

Sunday afternoon expt: a visit of the Pharmacy Museum of the University of Basel Switzerland

Historical perspective _ chinese medicinal plants_ Hippocrates

460-370 BC

- The works of Hippocrates (460-370 BC) contain 300 medicinal plants classified by physiological action: Wormwood and common centaury (*Centaurium umbellatum* Gilib) were applied against fever; garlic against intestine parasites; opium, henbane, deadly nightshade, and mandrake were used as narcotics; fragrant hellebore and haselwort as emetics; sea onion, celery, parsley, asparagus, and garlic as diuretics; oak and pomegranate as astringents

Ginseng root extracts (Panax q.) : evidence shows that taking **ginseng root** extracts daily for 12 weeks improves concentration and cognitive activities.
(cf pharmacognosy)

Historical perspective _ Key medical papyri

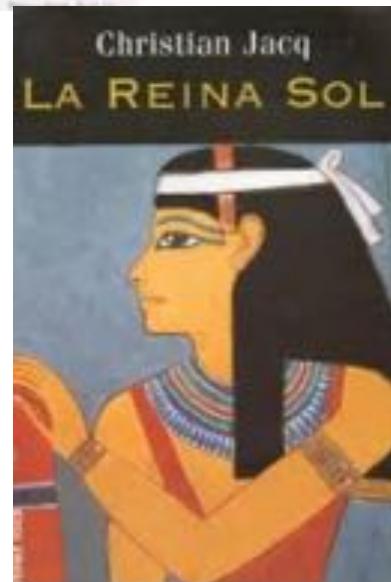

The Georg Ebers Papyrus.

Found in Egypt in the 1870s, the Ebers Papyrus contains prescriptions written in hieroglyphics for more than 700 remedies, including this one for an **acute asthma attack**.

From: University of Leipzig

- **The Kahun (1825 B.C)**

- **The Ebers (1534 B.C?)**
-internal medicine
- **The Edwin Smith Surgical Papyrus (1600 B.C)**
-surgical wounds and fractures

Historical perspective _ medicinal plant extracts

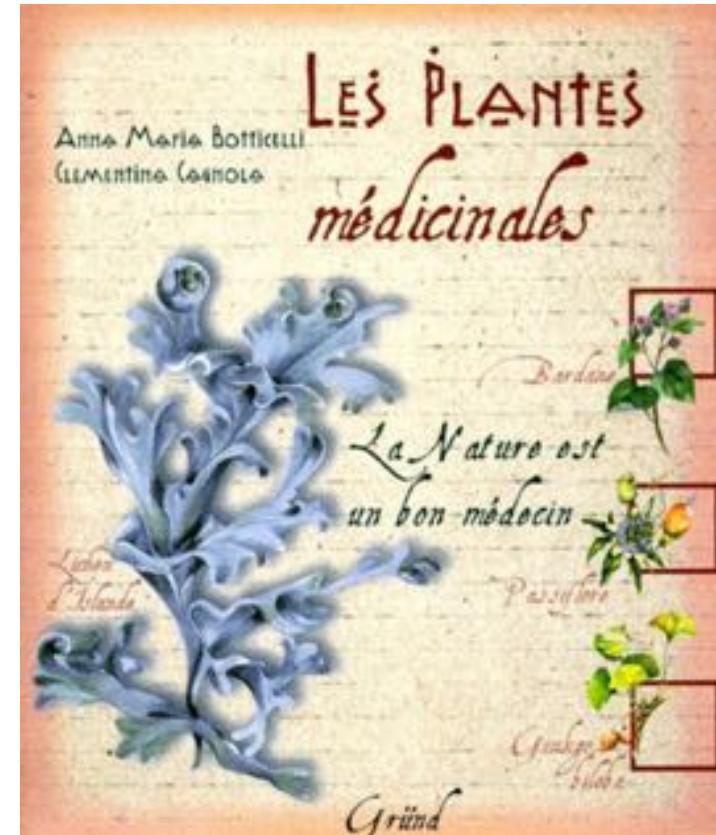

eg. *Papaver somniferum* (poppy seeds) known in the oldest civilisations as sleeping medicine

early past

recent
past

morphine binds opiate receptors (3 subtypes) which in turn mediate the opioid receptor signaling, and highlight advances in opioid molecular and behavioural pharmacology, widely used as analgesics in the clinic.

Historical perspective : Paracelsius : „sola dosis facit venenum”

1493-1541

Paracelsus studied medicine in Basel Switzerland

“solely the dose determines that a thing is not a poison”

History of medicine by J. Starobinski : a philosophical perspective

L'Histoire de la médecine de Jean Starobinski s'adresse non seulement au spécialiste, mais à chacun et chacune d'entre nous. Cet ouvrage demeure aujourd'hui encore l'occasion d'une réflexion portant sur les valeurs fondamentales de notre existence, et d'une prise de conscience critique de la médecine, car cette dernière -ne nous rendra plus heureux que si nous savons exactement ce qu'il faut lui demander.

Plague in ancient times
(now known as *Yersinia pestis*)
A Yersin : 1863-1943

Historical perspective : the future is the past only better ?

130 YEARS AGO : Montreal **1885**

Small Pox Victim: God's punishment ?

Edward Jenner invented patient
“vaccination” by scarification of cow pox
viruses and laid down the foundation of
immunology

TODAY's : Sierra Leone **2015**

EBOLA victims: all patients passed away

COVID **2019** world wide !

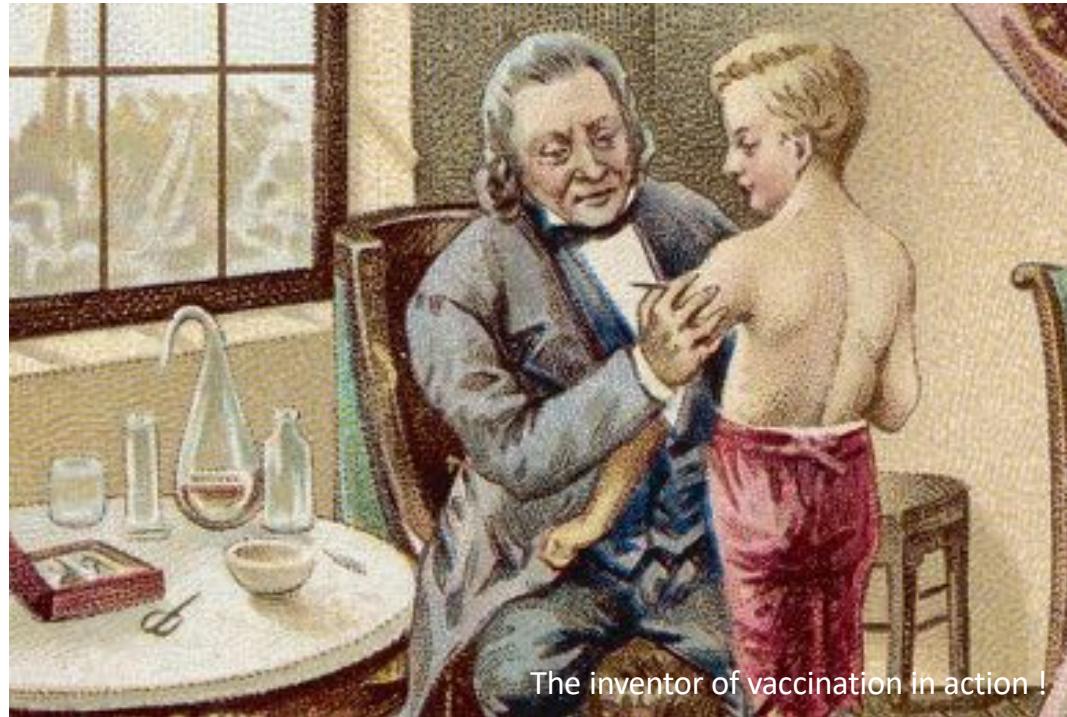

EBOLA'S LOST WARD

Two hundred years later we are still
striving at a number of viruses pandemia
and lots of unmet medical needs !

Historical true medical breakthroughs : the patient need

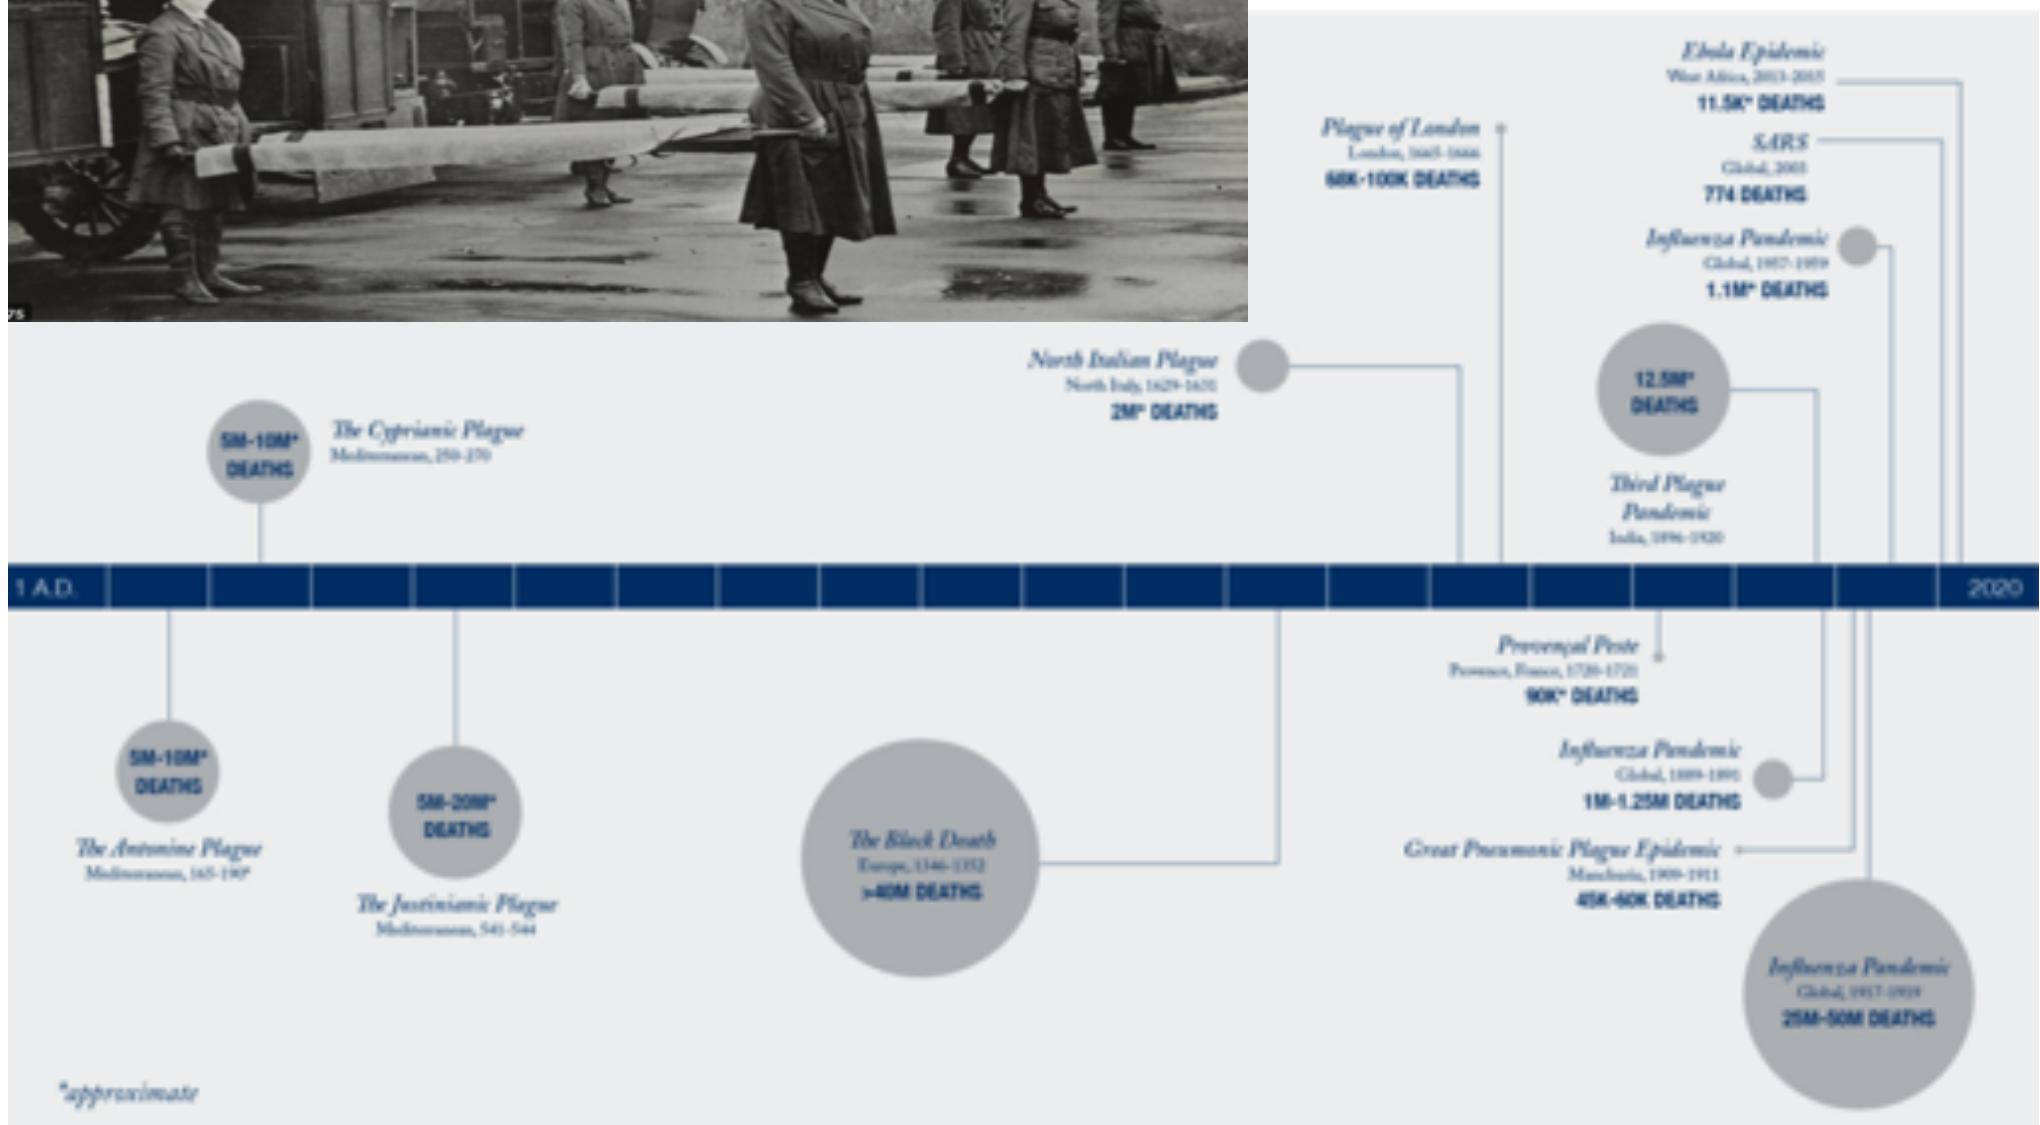

*The first steps in the development of a modern medicine !
Centuries before the advent of therapeutic targets elucidation !
No knowledge what so ever of the underlying molecular mechanism (MOA)*

WORKSHOP !

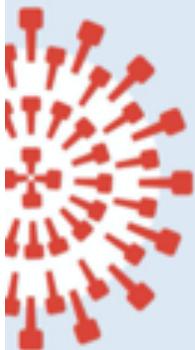

Would Edward Jenner's smallpox experiment pass a research ethics committee today ?
How can we go about discovering innovative medicine in the highly regulatory context of today ? Is a single fatality in clinical setting entitled to stop 10 years of research ?
How do we innovate healthcare today ? How much is 3 months life extension worth ?

Throughout history, the pandemic has been a constant compagnion

LAST CENTURY OF PANDEMICS TIMELINE

There have been five main pandemics in the past one hundred years. These are summarised in the table below:

1918
1920

SPANISH FLU (H1N1)

A virus which originated in birds, mutated and then infected pigs, which went on to infect humans.

CASES
500 MILLION

DEATHS
17 MILLION

3.4%

MORTALITY RATE

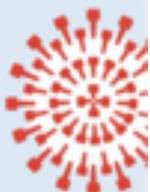

HIV/AIDS

Originating from Chimpanzees, HIV kills humans by repressing immunity systems. Nobody dies of HIV, but they die of AIDS-related conditions.

CASES
75 MILLION
DEATHS
32 MILLION

42.7%

MORTALITY RATE

1956
1958

ASIAN FLU (H2N2)

(H2N2) from East Asia was nicknamed "Asian Flu". This virus comprised of 3 different genes and was the mildest of the 20th-century pandemics.

CASES
478 MILLION

DEATHS
1.1 MILLION

0.23%

MORTALITY RATE

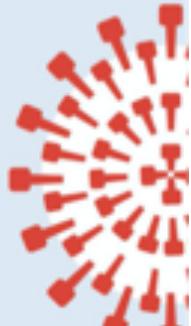

HONG KONG FLU (H3N2)

(H3N2) originating from Hong Kong. The population was said to have some immunity from the H2 in the Asian Flu pandemic.

CASES
200 MILLION
DEATHS
1 MILLION

0.5%

MORTALITY RATE

The future is the past : more pandemics, more zoonoses ... when, how massive ?

AIDS (HIV) pandemia
(Kaposi sarcoma of
bucal cavity)

1980's - today

Confronting asian flu H2N2 in 1957

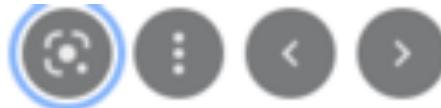

Confronting SarsCoV2 in 2020

Throughout history a pandemic burst (of bacterial, viral or of zoonoses origin) is a constant threatful compagnion of healthcare

MILLION COVID-19 DEATHS – A TIMELINE

JANUARY 2020

First death from COVID-19, reported in Wuhan, China.

1

1M

2M

3M

4M

5M

6M

JANUARY 2021

The U.S. continued to top COVID-19 death counts, but experts were hopeful the rollout of vaccines will help reduce mortality numbers.

JULY 2021

India accounted for almost a quarter of COVID-19 deaths during this period, driven by the delta variant. Later analyses said the total number was likely much higher, with one estimate putting the death toll at 3 million.

MARCH 2022

Several countries have started easing COVID-19 restrictions. But WHO officials continue to advise caution. While trends show COVID-19 cases are declining, they warn the pandemic is not yet over.

SEPTEMBER 2020

The U.S. topped total COVID-19 deaths during this period, reaching over 200,000.

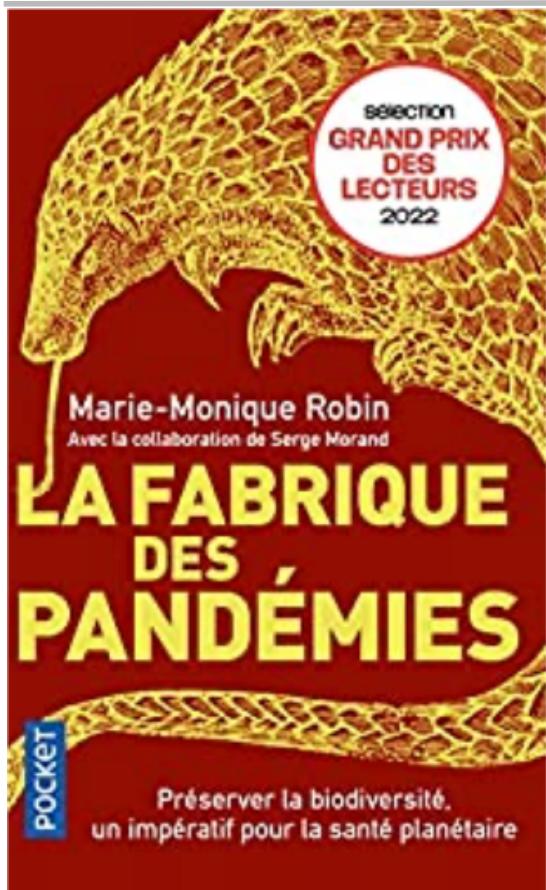

APRIL 2021

Uneven distribution of vaccines left several low- and middle-income countries with little to no access to doses.

NOVEMBER 2021

Official data showed the African region, excluding Egypt, had less than 150,000 deaths. But deaths in 13 countries had doubled since July, raising calls for more vaccine access as only 3% of the region's population was fully vaccinated.

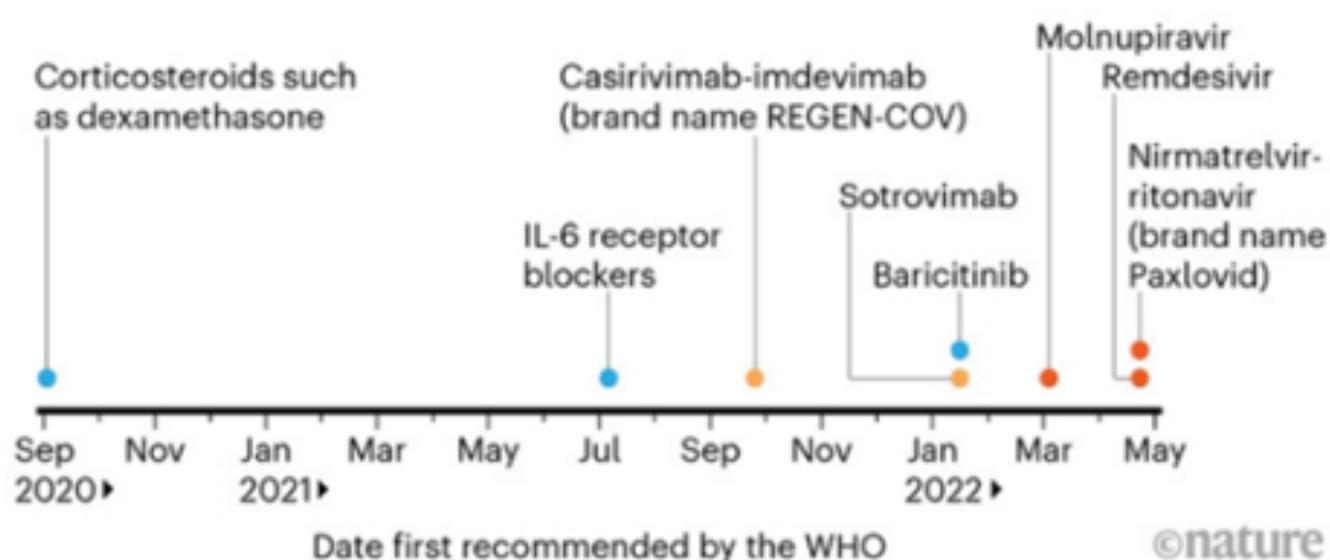

Throughout history Pandemias have been a constant compagnion
today's SarsCoV2 pandemia from zoonoses origin

VIRUS-TAMING TOOLS

The virus that causes COVID-19 was identified only in early 2020, but the World Health Organization has already recommended more than half a dozen treatments for the disease. Still other therapies have been recommended by domestic agencies such as the US National Institutes of Health.

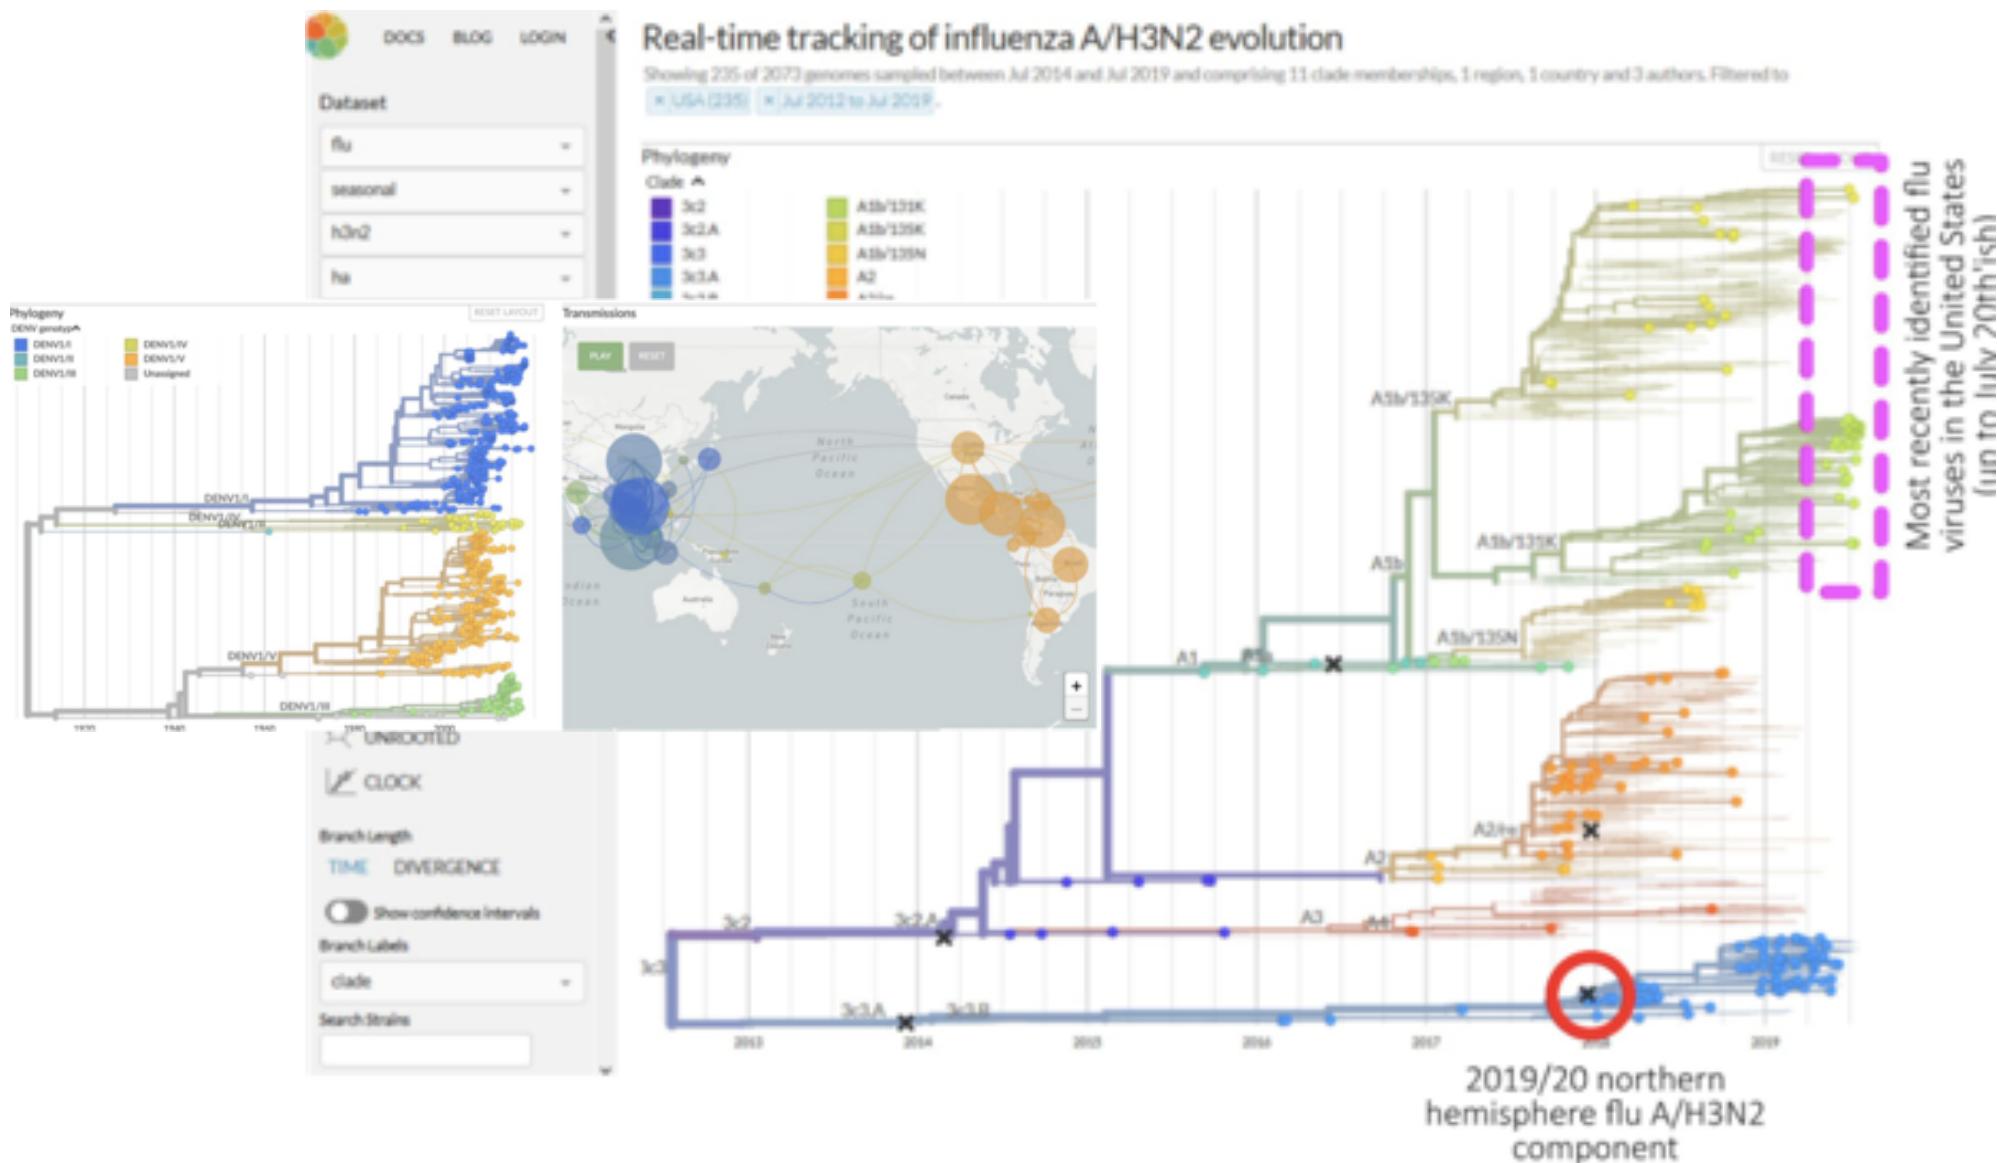

- Antiviral
- Monoclonal antibody
- Anti-inflammatory

Tropical diseases unmet medical need : health hackathon 2021 winners!

Fabulous discovery – first ever biological therapeutic

1920 : life expectancy of diabetes children is about 10-15 years !

Frederick Banting became as a GP interested in diabetes mellitus: he became aware of the scientific reports on stenosis of pancreas leaving the Langerhans islets intact and killing the trypsin producing cells. He left aside all his clinical duties to prove his hypothesis and received help from C Best to isolate upon 10 days ligature beagle dog pancreas islets: kids receiving those extracts however experienced no real benefit from this extract injection (5g/L to 4g/L and severe side effects ! Great disappointment ; F. Banting went on and reasoned that the extracts contained impurities such as bacteria. He decided to further purify.

Session 2: Historical breakthrough medicines

Frederick Banting then turned to a medical doctor biochemist James Collip who worked on an almost pure pyrogene free pancreatic insulin injectable. The efficacy was closed to the miracle! glycemia droped from 5g/L to 1g/L !! The kids came out of coma and were starting a new life !

Frederick Banting eventually received a well deserved Nobel Prize in 1923.

Sofar millions of diabetic patient's life has been safed thanks to Frederick Banting resilience and perseverance and benefited from this breakthrough !

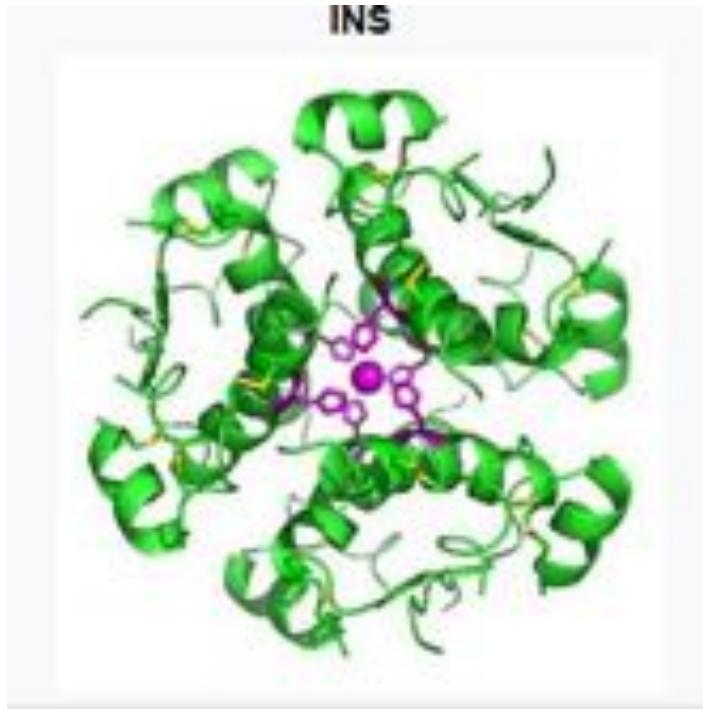

F Banting coined the name «insulin» from «insula» in latin (for islet/island of Langerhans) and became one of the most successful drug hunter ever in biomedical history.

Very few life threatening diseases have been cured sofar to such a extend of efficacy in modern medicine.

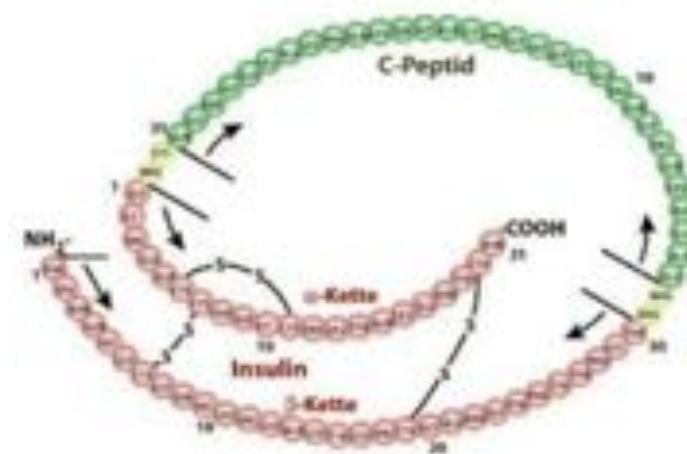

1920 : life expectancy of diabetes children is about 10-15 years !

Today diabetic patients live almost like healthy subjects !

Historical breakthrough medicines

Frederick Banting became as a GP interested «by accident» to help many kids in life threatening conditions purified extracts from dog ligatured pancreas : kids experienced no real benefit up until the dog pancreas extracts got purified. Later insulin has been extracted from porcine pancreas and provided by Eli Lilly USA

1960s : shortage of porcine insulin: bacterial recombinant insulin came to the rescue (first «biological» ever) Axel Ullrich et al. 1970s !

FROM AN HISTORICAL PERSPECTIVE THESE MEDICINE WERE TRUE INNOVATIONS ! TODAY'S REGULATORY AUTHORITIES WOULD PROBABLY NOT LET THEM PASS THROUGH THE REGISTRATION

Rat insulin genes: construction of plasmids containing the coding sequences.

Ullrich A, Shine J, Chirgwin J, Pictet R, Tischer E, Rutter WJ, Goodman HM.

Abstract

Recombinant bacterial plasmids have been constructed that contain complementary DNA prepared from rat islets of Langerhans.

sulin mRNA is not proinsulin but a larger precursor, pre-proinsulin, that contains more than twenty additional amino acids (Chan, Keim and Steiner, 1976; Chan et al., 1979) at the N terminus of the molecule. This prepeptide may be a secretory signal and is cleaved rapidly after synthesis before packaging in secretory granules. Whereas the events involved in insulin translation and post-translational processing
