

Get started with copilot!

1. First you need to sign up for GitHub premium, as academics we have it for free, go [here](#) , you need to upload a pic of your camipro if it has an expiration date, otherwise your contract
2. install visual studio code
3. install the copilot extension
4. once your gitHub account is pro sign in on the VS code extension!
 - a. (You might need to quit and re enter in visual studio)

Than just press TAB to accept copilot suggestions!

alt/option +] next suggestion (sometimes it doesnt work)

TIPS:

- write comments about what you intend to do, to give copilot 'context' and more accurately predict your line of code!
- copilot sees all your open tabs, therefore it is suggested to open 2/3 tabs with scripts than are pertinent with what you are doing
- other tricks [here](#)
