

Experimental Physical Chemistry

An Inquiry-based laboratory course

How to search the scientific literature (according to Gemini!) :

1. **PubMed (for biomedical literature):** If the reference is related to biology or medicine, PubMed (pubmed.ncbi.nlm.nih.gov) is your best friend. Search by author names, keywords from the title, or the journal name. ▾
2. **Google Scholar:** Google Scholar (scholar.google.com) is a broader search engine that indexes scholarly literature across many disciplines. It's a good starting point for any reference. ▾
3. **Web of Science:** Web of Science is a subscription-based database that allows you to search for citations and see which papers have cited a particular work. It's very comprehensive. ▾
4. **Journal Websites:** If you know the journal name, you can go to the journal's website and search their archives.
5. **University Libraries:** University library websites often have search tools and databases that can help you find scholarly articles. ▾
