

# CIVIL 534: Computational systems thinking for sustainable engineering

---

## Logistics

Lectures: Wednesday 9:15-11:00

Exercises: Wednesday 8:15-9:00 and 11:15-12:00 (time to work on graded assignments and project milestones)

Location: CO 121

Instructor: Andrew Sonta, Assistant Professor of Civil Engineering, ETHOS Lab

Email: [andrew.sonta@epfl.ch](mailto:andrew.sonta@epfl.ch)

Office hours: Wednesdays, 14:00-15:00 (or by appointment)

Office: GC G1 484

Teaching assistant: Kanaha Shoji, PhD Candidate, ETHOS Lab

Email: [kanaha.shoji@epfl.ch](mailto:kanaha.shoji@epfl.ch)

Will be present during 11:15-12:00 exercise session

Project teaching assistant: Vasantha Ramani, Postdoctoral Scientist, ETHOS Lab

Email: [vasantha.ramani@epfl.ch](mailto:vasantha.ramani@epfl.ch)

Consultation by email

## Course description

This course focuses on two key topics in the context of complex engineered urban systems: systems thinking and network analysis. The course focuses on both theory and computing. The objective of this course is to develop expertise in computationally analyzing and modeling complex systems in civil and urban systems engineering, with a particular emphasis on advancing sustainability.

## Content

- Introduction to systems thinking: theory and applications
- Computational modeling of system dynamics
- Systems and sustainability (case studies on resource use and environmental impacts)
- Introduction to network analysis
- Computational modeling of networks with built environment applications
- Integrating computational and systems thinking
- Using computational tools for engineering decision-making for advancing sustainability

## Learning objectives

- Explain what comprises a complex system in the built environment
- Model complex urban systems and system dynamics
- Explain the characteristics of graphs and networks
- Use network analysis to describe complex systems
- Develop and model strategies for intervening in systems to advance sustainability objectives

## Transversal skills

- Communicate effectively with professionals from other disciplines.
- Take account of the social and human dimensions of the engineering profession.
- Demonstrate the capacity for critical thinking

## Coursework and assessment

Coursework will consist of two graded assignments, two midterm exams, and one final project (which includes two graded milestones).

- Graded assignments (20% | 2 @ 10% each). These assignments will reinforce the concepts from lecture and will include a mix of theoretical questions and practical questions using Python and Jupyter Notebooks. We will use the EPFL noto interface for working in Jupyter Notebooks.
- Midterms (40% | 2 @ 20% each).
- Course project (40%). The course project description is available on Moodle. The project will involve three milestones and a presentation on the final day of the class. You will work in groups of 3-4.
  - Project milestones (20% | 2 @ 10% each)
  - Final presentation (20%)

## Course schedule (subject to change)

| Week                            | Date   | Course Content  | Readings   | Due (Fridays at 17h)                     |
|---------------------------------|--------|---|--|--|
| 1                               | 19-Feb | Couse introduction<br>What is systems thinking?<br>What are networks?<br>The role of systems + networks in sustainable cities |  |  |
| <b>Part 1: Systems thinking</b> |        |   |  |  |
| 2                               | 26-Feb | Systems intro<br>One-stock systems  | "Top of the Food Chain"<br>Meadows Chapter 1   |  |
| 3                               | 5-Mar  | One and two stock systems<br>Delays and oscillations<br>Stock constraints   | Meadows Chapter 2  |  |
| 4                               | 12-Mar | System behavior<br>Resilience, self-organization, hierarchy<br>Structure vs. behavior   | Meadows Chapters 3 and 4   | Assignment 1<br>(due Fri 14 March)       |
| 5                               | 19-Mar | System traps and opportunities<br>Intervening in a system   | Meadows Chapters 5 and 6   |  |
| 6                               | 26-Mar | <b>Systems Midterm</b>  |  |  |
| <b>Part 2: Network analysis</b> |        |   |  |  |
| 7                               | 2-Apr  | Networks intro<br>Building blocks<br>Types of networks  | Newman Chapter 1; 6.1-6.4; 6.6; 6.10-6.11  | Project milestone 1<br>(due Fri 4 April) |
| 8                               | 9-Apr  | Edge properties<br>Node properties  | Newman 6.12; 6.14; 7.1   |  |
| 9                               | 16-Apr | Clustering<br>Centrality  | Newman 7.2-7.4, 7.6, 7.7   |  |
| 10                              | 23-Apr | No Class - Spring Break   |  |  |
| 11                              | 30-Apr | Networks in urban systems<br>Random graph models<br>Network structure<br>Percolation  | Newman 10.1-10.6, 11, 13.1-13.2, 15<br>Note: These chapters are much more detailed than what we cover in class | Assignment 2<br>(due Fri 2 May)          |
| 12                              | 7-May  | Naturally-defined, model-defined, and data-defined networks<br>Systems thinking + networks                                    | "Review and structural analysis of system dynamics models in sustainability science"                           | Project milestone 2<br>(due Fri 9 May)   |
| 13                              | 14-May | <b>Networks Midterm</b>   |  |  |
| <b>Part 3: Wrap-up</b>          |        |   |  |  |
| 14                              | 21-May | Engineering decision making and sustainability applications;<br>Project consultations   |  |  |
| 15                              | 28-May | <b>Project presentations</b>  |  |  |
