

# Computer Graphics

## *Character Animation II*

Mark Pauly

Geometric Computing Laboratory

# Face Animation

# Expression Model

- Darwin argued in 1872 that certain emotional expressions are the same for all people
- Hager & Ekman showed that there are constants across cultures in the emotional meanings of certain facial expressions

Aim for a generic facial expression model!

# Parametric Expression Model

- Low-dimensional representation of facial expression space

5000 vertices

39 parameters

# Blendshapes / Morph Targets

- Use neutral face  $\mathbf{b}_0$  and expressions  $\mathbf{b}_1, \dots, \mathbf{b}_n$
- Each blendshape  $\mathbf{b}_i$  is a vector of  $m$  stacked vertex positions

$$\mathbf{b}_i = \begin{pmatrix} \mathbf{x}_1^{(i)} \\ \vdots \\ \mathbf{x}_m^{(i)} \end{pmatrix} \in \mathbb{R}^{3m}$$

- All meshes must have the same number  $m$  of vertices and the same triangulation

# Linear Blendshapes

- Produce new facial expression  $\mathbf{F}(\alpha)$  by *affine combination* of example shapes  $\mathbf{b}_0, \dots, \mathbf{b}_n$  (with  $\sum_k \alpha_k = 1$ )

$$\mathbf{F}(\alpha) = \sum_{k=0}^n \alpha_k \mathbf{b}_k$$

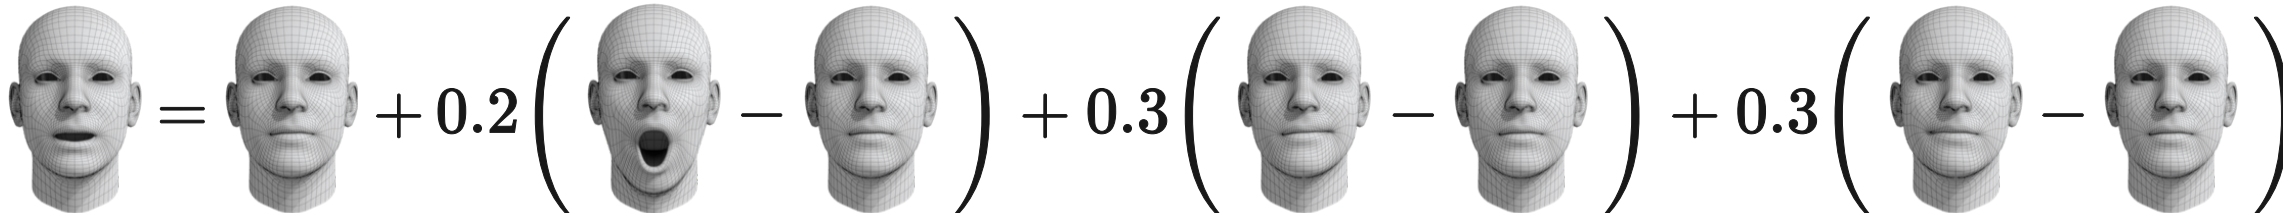

Weights  $\alpha_k$  hard to control

# Linear Delta-Blendshapes

- Produce new facial expression  $\mathbf{F}(\mathbf{w})$  by adding to the neutral face  $\mathbf{b}_0$  a weighted sum of expression-displacements:

$$\mathbf{F}(\mathbf{w}) = \mathbf{b}_0 + \sum_{k=1}^n w_k (\mathbf{b}_k - \mathbf{b}_0)$$

A visual equation showing a sequence of 3D face models. It starts with a neutral face, followed by an equals sign, then a neutral face, a plus sign, a weight of 0.2, an opening parenthesis, a face with an open mouth minus a neutral face, a closing parenthesis, a plus sign, a weight of 0.3, an opening parenthesis, a face with a slight smile minus a neutral face, a closing parenthesis, a plus sign, a weight of 0.3, an opening parenthesis, a face with a slight frown minus a neutral face, and a closing parenthesis.

Weights  $w_k$  are easier to control than  $\alpha_k$

# Linear Delta-Blendshapes

- Facial expressions by blending example poses

$$\mathbf{x}_i = \mathbf{x}_i^{(0)} + \sum_{k=1}^n w_k \left( \mathbf{x}_i^{(k)} - \mathbf{x}_i^{(0)} \right)$$

- Examples (blendshapes) **must** have identical triangulation
- Linear interpolation per vertex  $\mathbf{x}_i$
- Weights  $w_k$  typically are in  $[0, 1]$ .  
(see what happens at 200% on [youtube](#))

# Facial Action Coding System (FACS)

- Developed by Paul Ekman & Wallace Friesen, 1978
- Standard for categorizing facial expressions
- Defines 46 *action units*, related to facial muscles
- Facial expressions are combined from action units

## fear

- ① eyebrows raised and pulled together
- ② raised upper eyelids
- ③ tensed lower eyelids
- ④ lips slightly stretched horizontally back to ears

## disgust

- ① nose wrinkling
- ② upper lip raised

## surprise

Lasts for only one second:

- ① eyebrows raised
- ② eyes widened
- ③ mouth open

## sadness

- ① drooping upper eyelids
- ② losing focus in eyes
- ③ slight pulling down of lip corners

## anger

- ① eyebrows down and together
- ② eyes glare
- ③ narrowing of the lips

## happiness

A real smile always includes:

- ① crow's feet wrinkles
- ② pushed up cheeks
- ③ movement from muscle that orbits the eye

# Facial Action Coding System (FACS)

*Happiness = 6+12*

ID	Description
0	Neutral face
1	Inner brow raiser
2	Outer brow raiser
4	Brow lowerer
5	Upper lid raiser
6	<b>Cheek raiser</b>
7	Lid tightener
8	Lips toward each other
9	Nose wrinkler
10	Upper lip raiser
11	Nasolabial deepener
12	<b>Lip corner puller</b>
13	Sharp lip puller
14	Dimpler
15	Lip corner depressor
16	Lower lip depressor
17	Chin raiser
18	Lip pucker
19	Tongue show
20	Lip stretcher
21	Neck tightener
22	Lip funneler
23	Lip tightener

ID	Description
24	Lip pressor
25	Lips part
26	Jaw drop
27	Mouth stretch
28	Lip suck
29	Jaw thrust
30	Jaw sideways
31	Jaw clencher
32	Lip bite
33	Cheek blow
34	Cheek puff
35	Cheek suck
36	Tongue bulge
37	Lip wipe
38	Nostril dilator
39	Nostril compressor
40	Glabella lowerer
41	Lid droop
42	Inner eyebrow lowerer
43	Eyes closed
44	Eyebrow gatherer
45	Blink
46	Wink

# Facial Action Coding System (FACS)

*Sadness = 1+4+15*

ID	Description

# Face Animation in Unity

# Scan Actor in FACS Expressions?

# Blendshapes Summary

- 👍 Very simple & efficient computations
- 👍 Supported by all modeling tools
- 👍 Can also be used for speech synthesis
- 👍 Standardized by FACS
- 👎 Expressions outside “blendshape space” not possible
- 👎 Requires a large number of blend shapes
- 👎 Requires a large number of controllers/sliders

# Quiz: Blendshapes vs. Delta-Blendshapes

Which method is more expressive, i.e., can produce more/richer expressions?

**A:** Blendshapes

**B:** Delta-Blendshapes

**C:** Both can produce equivalent expressions
