

Set Theory

JACQUES DUPARC

*Bâtiment Anthropôle
CH - 1015 Lausanne*

*Jacques.Duparc@unil.ch
Jacques.Duparc@epfl.ch*

The logo of the École Polytechnique Fédérale de Lausanne (EPFL) is displayed in a bold, red, sans-serif font. The letters are stylized, with the 'E' and 'F' having a unique geometric design.

Contents

Introduction	9
I The Theory Itself	11
1 The Axioms	13
1.1 Extensionality and Comprehension	16
1.2 Pairing, Union and Replacement	18
1.3 Relations and Functions	21
2 Well-orderings and Ordinals	23
2.1 Well-orderings	23
2.2 Ordinals	29
2.3 Order Type, Successor Ordinals and Limit Ordinals	35
2.4 Classes	38
2.5 Transfinite Induction and Recursion	39
2.6 Ordinal Addition, Multiplication and Exponentiation	40
3 Extension by Definition and Conservative Extension	45
3.1 Extension by Definitions	45
3.2 Conservative Extensions	51
4 axiom of Choice and Cardinals	53
4.1 Axiom of choice, Zorn's Lemma and Zermelo's Theorem	53
4.2 Cardinals	57
4.3 The Power Set Axiom	61
4.4 Cardinal Addition, Multiplication and Exponentiation	64
4.5 Cofinality	71
4.6 First Encounter with CH, GCH, and Inaccessible Cardinals	76
5 Well-Founded Sets and the Axiom of Foundation	79
5.1 Well-Founded Sets	79
5.2 Foundation	97

II Relativization and Absoluteness	103
6 From Inside a Class	105
6.1 Relativization	105
6.2 Consistency and Model Existence	107
7 The Mostowski Collapse	109
7.1 Recursion on Well-founded and “Set-Like” Relations	109
7.2 The Mostowski Collapsing Functional	112
8 Preservation under Relativization	123
8.1 Relativization of ZF	123
8.2 Absoluteness	129
III The Consistency of ZF	141
9 Arithmetic and Recursivity	143
9.1 Recursive Sets of Integers and Functions $\mathbb{N}^p \longrightarrow \mathbb{N}$	143
9.2 Robinson Arithmetic	146
9.3 Coding Sequences of Integers	147
9.4 Gödel Numbers	150
9.5 Coding the Proofs	156
10 Undecidability Results	175
10.1 Undecidability of Robinson Arithmetic	175
10.2 Peano Arithmetic and IS_1^0	179
10.3 The Arithmetical Hierarchy	180
10.4 Gödel’s Second Incompleteness Theorem	181
10.5 Jech’s Proof of Gödel’s Second Incompleteness Theorem for Set Theory	188
IV Gödel’s Constructible Universe	191
11 The Constructible Sets	193
11.1 Definability	193
11.2 The Constructible Sets	197
11.3 The Constructible Universe Satisfies ZF	204
11.4 A Reflection Principle for L	204
12 AC and CH inside Gödel’s Constructible Universe	211
12.1 The Axiom of Constructibility and the axiom of choice	211
12.2 The Axiom of Constructibility and the Generalized Continuum Hypothesis	213
12.3 Inner Models	218

V Forcing	219
13 Forcing Conditions and Generic Filters	221
13.1 Introduction	221
13.2 Montague's Reflection Principle	223
13.3 Posets and Generic Filters	225
14 $\mathbb{P}$-names and Generic Extensions	237
14.1 $\mathbb{P}$ -names	237
14.2 Generic Extensions	240
15 The Truth Lemma	251
15.1 Forcing from inside $\mathbf{V}$	251
15.2 Forcing from inside $\mathbf{M}$	252
15.3 Connecting the Truth in $\mathbf{M}[G]$ to the Truth in $\mathbf{M}$	263
16 ZFC within the Generic Extension and Cardinal Preservation	273
16.1 ZFC within the Generic Extension	273
16.2 A First Attempt to Deny CH	279
16.3 Cardinal Preservation	281
17 Independence of CH	289
17.1 Forcing $2^{\aleph_0} = \aleph_2$	289
17.2 Reflecting back on forcing $2^{\aleph_0} = \aleph_2$	295
17.3 Forcing $2^{\aleph_0} = \aleph_{\alpha+1}$	296
18 Independence of AC	301
18.1 Notions of Forcing and Automorphisms	301
18.2 Hereditarily Ordinal Definable Sets	305
18.3 Forcing $\neg\mathbf{AC}$	306
VI ZF without the Axiom of Choice	311
19 Cardinality Revisited	313
19.1 Injections and Surjections Revisited	313
19.2 Hartogs' Lemma	315
19.3 Cardinals without the axiom of choice	316
20 About $\mathbb{R}$ without the axiom of choice	319
20.1 Variations on the Reals	319
20.2 Outcomes of $\mathbb{R}$ as a Countable Union of Countable Sets	322

21 Symmetric Submodels of Generic Extensions	327
21.1 Symmetry Groups and Hereditarily Symmetric $\mathbb{P}$ -names	327
21.2 The Symmetric Submodel	332
22 Some Applications of the Symmetric Submodel Technique	341
22.1 Forcing $\mathbb{R}$ as a Countable Union of Countable Sets	341
22.2 Forcing the Well-Orderings of the Reals Out	352
22.3 Forcing Every Ultrafilter on ω is Principal	357
VII Set Theory with Atoms	363
23 Atoms and Permutation Models	365
23.1 Zermelo-Fraenkel with Atoms (ZFA)	365
23.2 Permutation Models	368
23.3 The Basic Fraenkel Model	376
23.4 The Second Fraenkel Model	379
23.5 The Ordered Mostowski Model	384
24 Simulating Permutation Models by Symmetric Models	391
24.1 The Jech-Sochor Embedding Theorem	391
24.2 Some applications of the Jech-Sochor Embedding Theorem	403
Index of Notations	413
Index of Concepts	417
Bibliography	421
