

# Engineering & life sciences

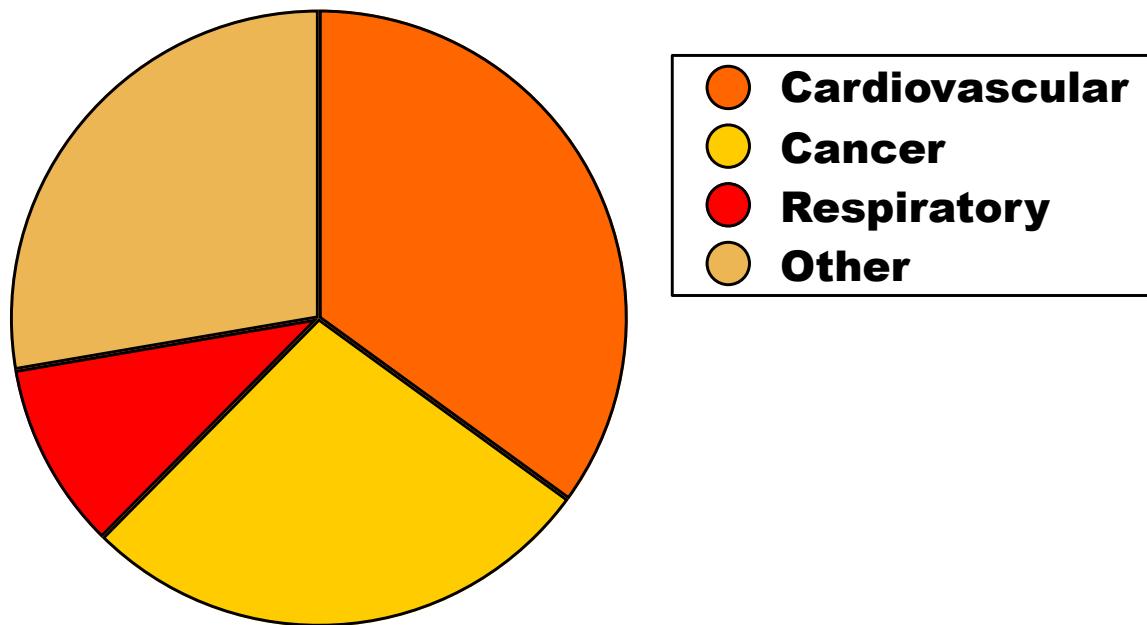

---

# Cardiovascular disease

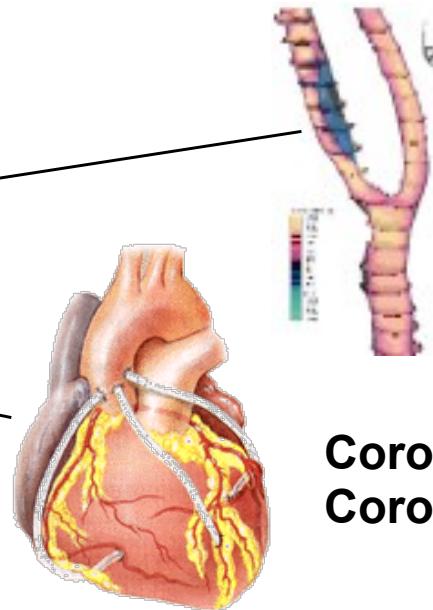

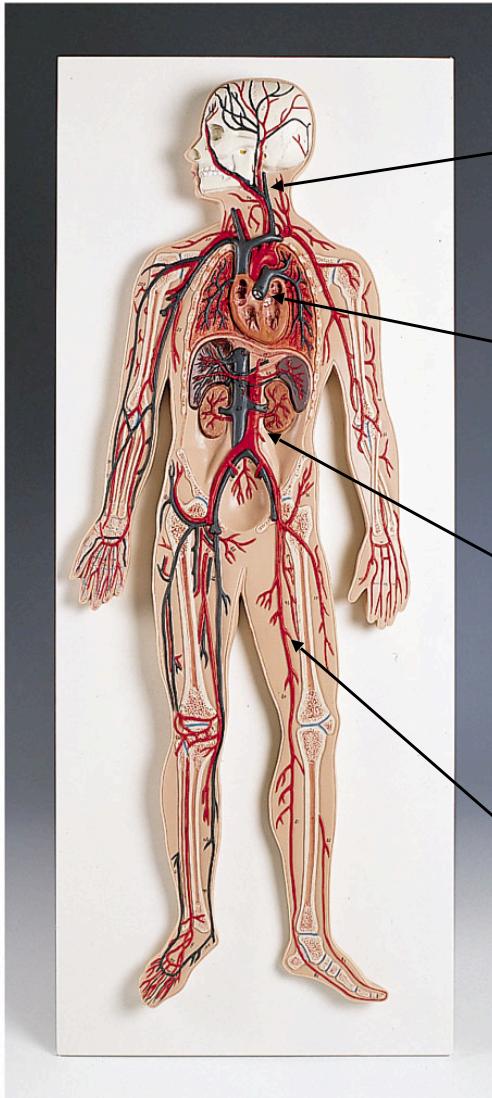

---

Morbidity in western nations

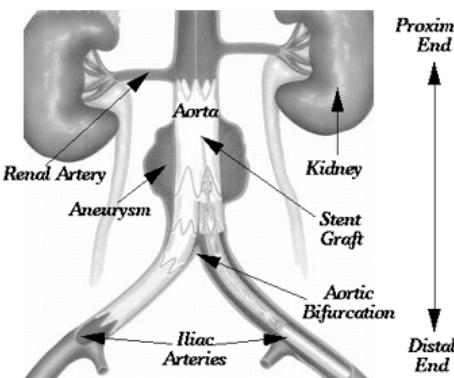

Treatment of heart failure alone costs more than the treatment of all forms of cancer

# Biomechanics & vascular disease

Carotid artery stenosis  
Stroke

Coronary artery disease  
Coronary artery bypass grafts

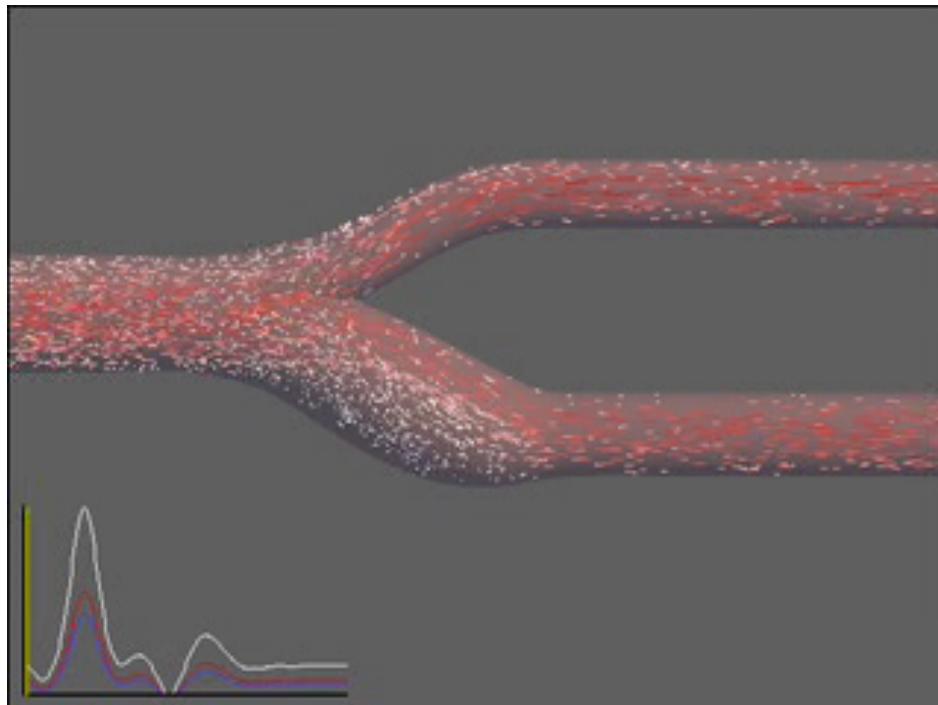

Aortic aneurisms

Peripheral vascular disease

# Effect of hemodynamical forces on arterial wall

---

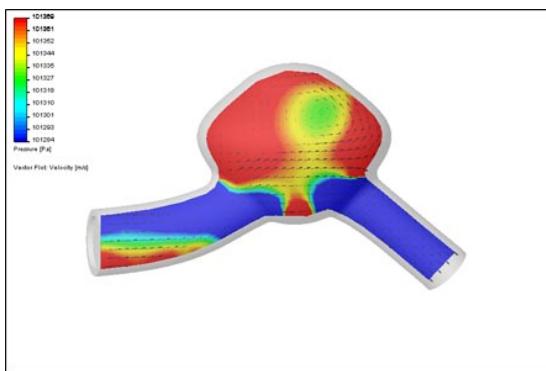

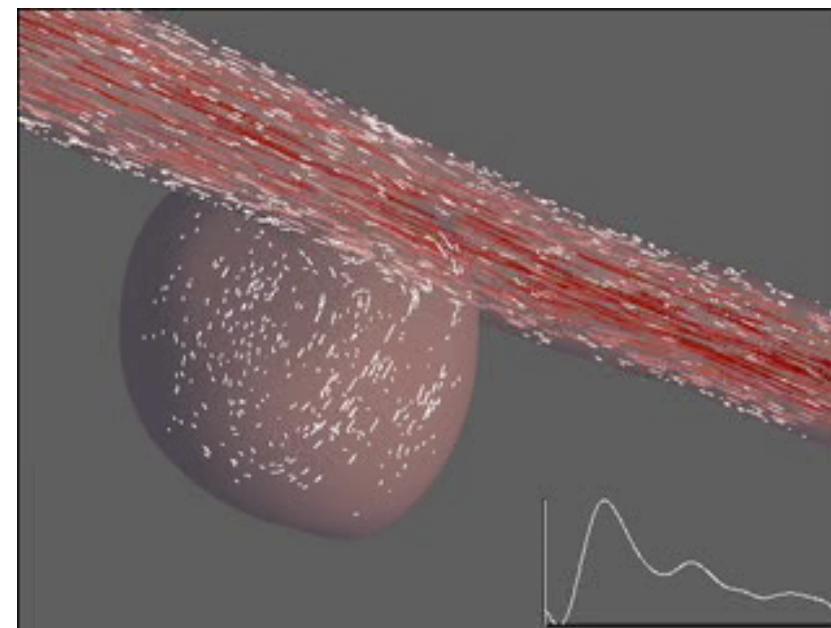

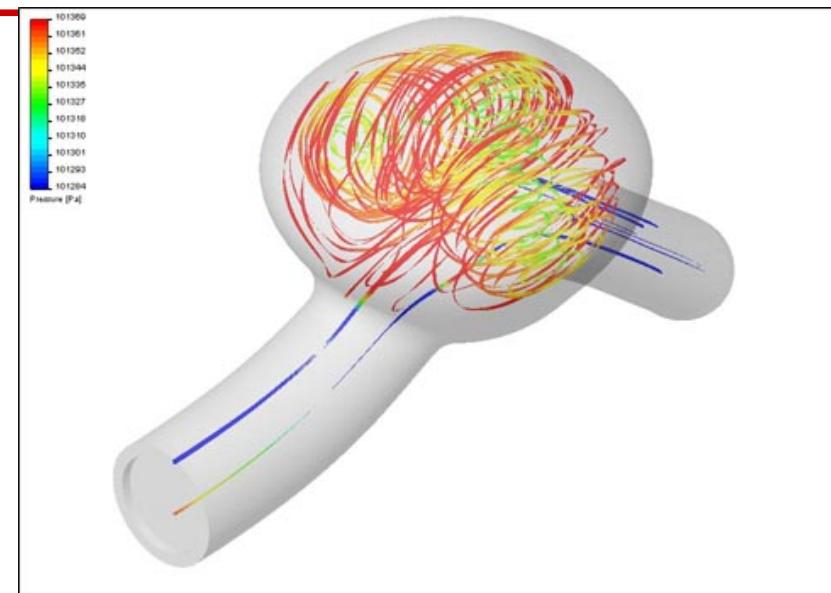

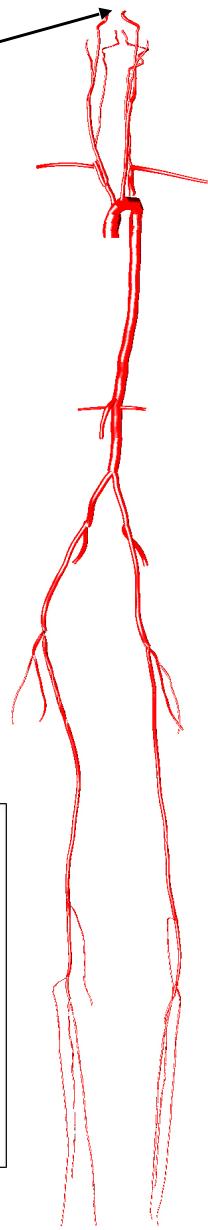

1. Wall shear stress:  $\tau_{wall} = \frac{4\mu Q}{\pi r^3}$

Unidirectional high shear stress: atheroprotective condition.

Oscillatory shear stress: plaque-prone condition.

# Blood flow and CV disease(3)

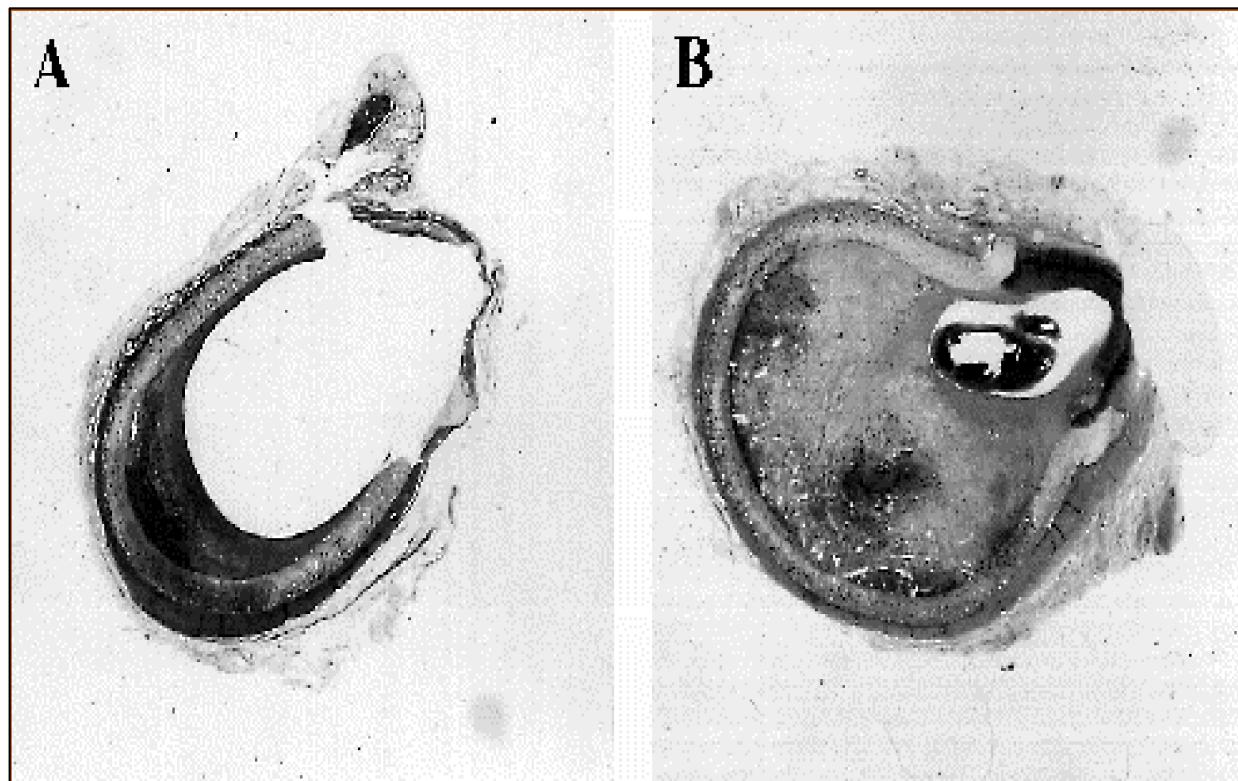

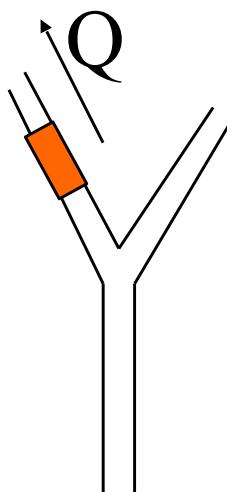

# Ventricular & heart valve mechanics

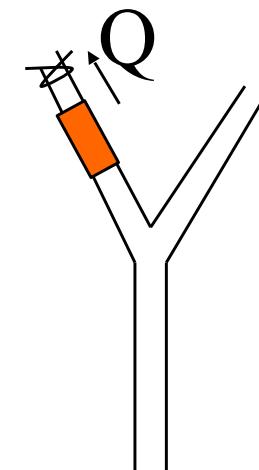

# Hemodynamics and cardiovascular disease (II)

---

Normal flow

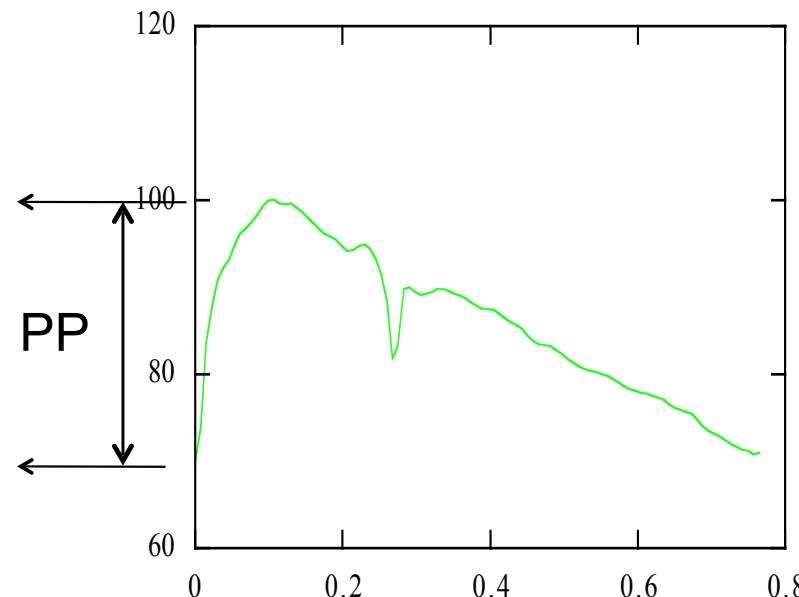

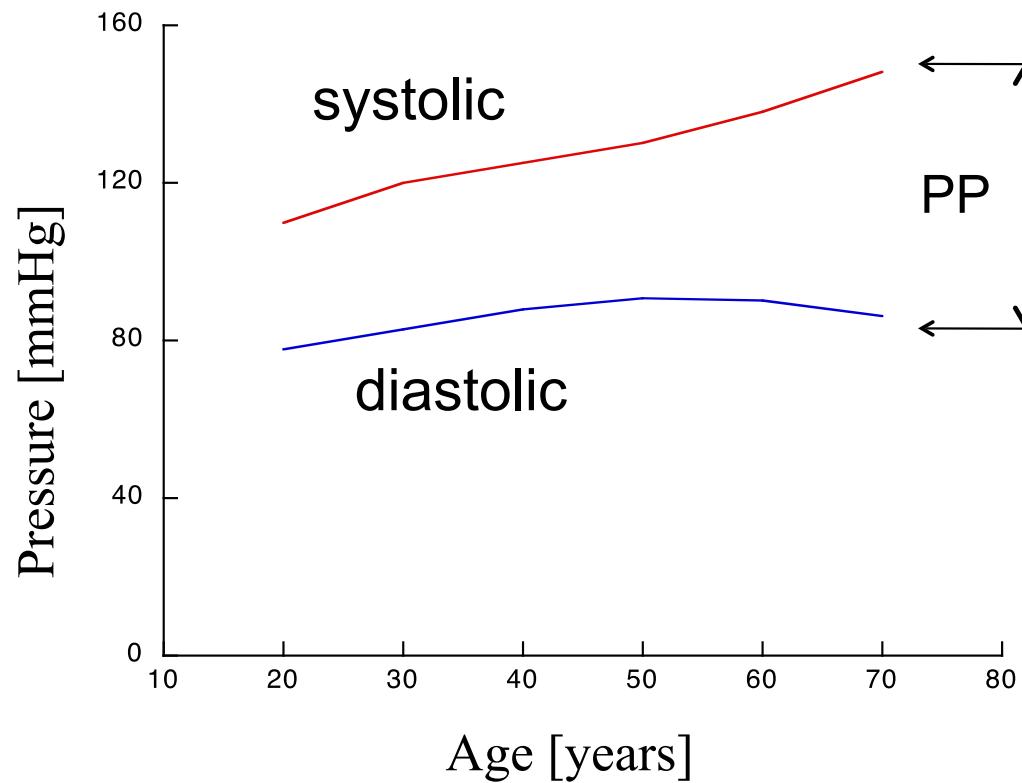

Reduced flow

# Hemodynamics and cardiovascular disease (III)

---

Framingham study:  
Pulse Pressure (PP) is the single best predictor of coronary heart disease (Franklin et al, 1998)

# Pressure and flow wave propagation
