

COMSOL tutorial 2: Geometry tools

To learn the geometry tools of Comsol, built a busbar by following the steps described in “Appendix A — Building a Geometry”, of the pdf document:

IntroductionToCOMSOLMultiphysics.pdf

This pdf file should be in the following folder:

COMSOL (Installation directory)/Multiphysics/doc/pdf/COMSOL_Multiphysics/

As proposed in this tutorial, start to add the physics, the study, and some parameters.

When you have finished this tutorial, double the thickness of the busbar by changing the related parameter.
