

# **STI Sustainability strategy**

**Dr. Anna Kounina  
Massé**

**STI Sustainability  
Manager**

**7 May 2025**

## O U T L I N E

# General context

Sustainability in STI labs

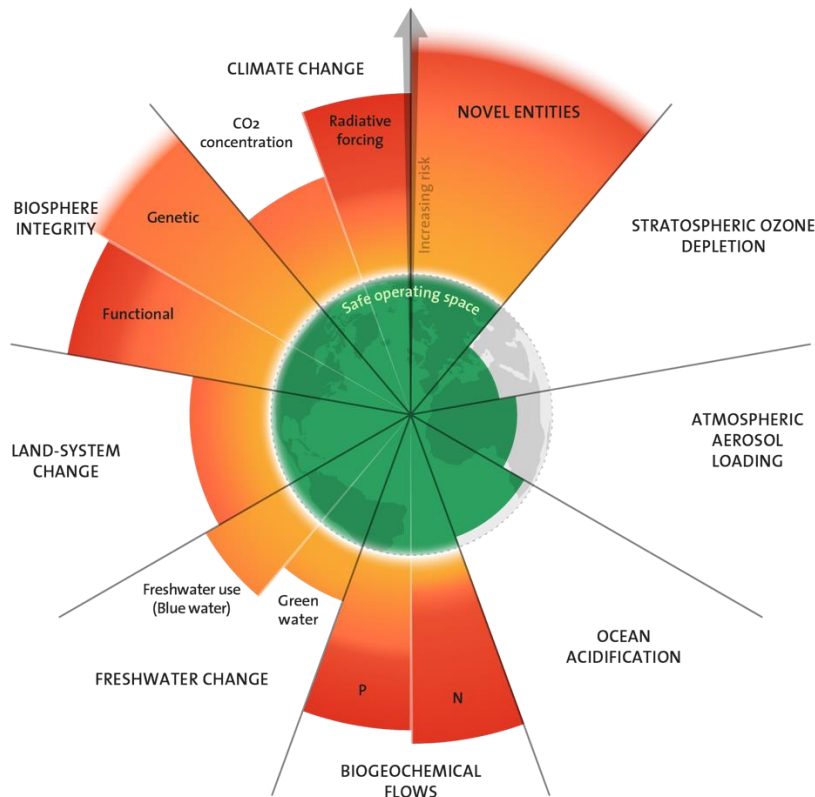

Assess: SML carbon footprint

Plan: action plan consolidation

Transform: key actions implementation

Next steps

# 6 out of 9 planetary boundaries crossed

The **Planetary Boundaries** are the safe limits for human pressure on the nine critical processes which together maintain a stable and resilient Earth.

As of 2023, **six of the nine** boundaries have been **transgressed**.

**Crossing boundaries** increases the risk of generating **large-scale abrupt or irreversible environmental changes**. Drastic changes will not necessarily happen overnight, but together the boundaries mark a critical threshold for increasing risks to people and the ecosystems we are part of.

# Legal framework in Switzerland

## Paris Agreement

- Ratified on October 6, 2017
- Switzerland's commitment (2017)
  - **Reduce emissions by 50% by 2030** compared to 1990 levels
  - by taking into account part of the emission reductions achieved abroad

2017

2023

## Climate and Innovation Act

- **Zero net emissions by 2050** (carbon neutrality)

# EPFL published a 2030 Climate & Sustainability Strategy

[go.epfl.ch/sustainability\\_strategy](https://go.epfl.ch/sustainability_strategy)

**Interconnection between  
education, research,  
innovation and campus  
operations**

EPFL

## 2030 Climate & Sustainability Strategy

EPFL's Climate & Sustainability Strategy spells out the steps we will take to fulfill our responsibility to our community, society and the environment. It provides a 360° view of our past, present and future sustainability-oriented actions implemented across our missions, campuses and operations.

Released on February 23, 2023

# Objectives and fields of action

**Reduce EPFL's greenhouse gas emissions by 40% by 2030**

**EDUCATION / OUTREACH**

**RESEARCH / GREEN LABS**

**INNOVATION**

**ENERGY / BUILDINGS**

**IT SYSTEMS**

**PROCUREMENTS / WASTE**

**FINANCES / FUNDING**

**TRAVEL**

**COMMUTING**

**FOOD SERVICES**

**RESILIENT CAMPUSES**

**COMMUNITY / AWARENESS**

# Purchases are the highest contributor to the EPFL GHG emissions

Released on February 23, 2023  
[go.epfl.ch/sustainability\\_strategy](https://go.epfl.ch/sustainability_strategy)

## Total CO<sub>2</sub> balance

Breakdown of EPFL's partial GHG emissions in 2019

	Travel	16,614 t CO <sub>2</sub> -eq
	Energy	16,130 t CO <sub>2</sub> -eq
	Food	6,062 t CO <sub>2</sub> -eq
	IT systems	4,829 t CO <sub>2</sub> -eq
	Commuting	3,783 t CO <sub>2</sub> -eq

Estimation of GHG emissions of other purchases

**Most bio-chemical, consumable and equipment purchases come from lab activities<sup>1</sup>**

<sup>1</sup> I am currently working on extracting detailed figures from the procurement team data

# Q&A

## OUTLINE

General context

# Sustainability in STI labs

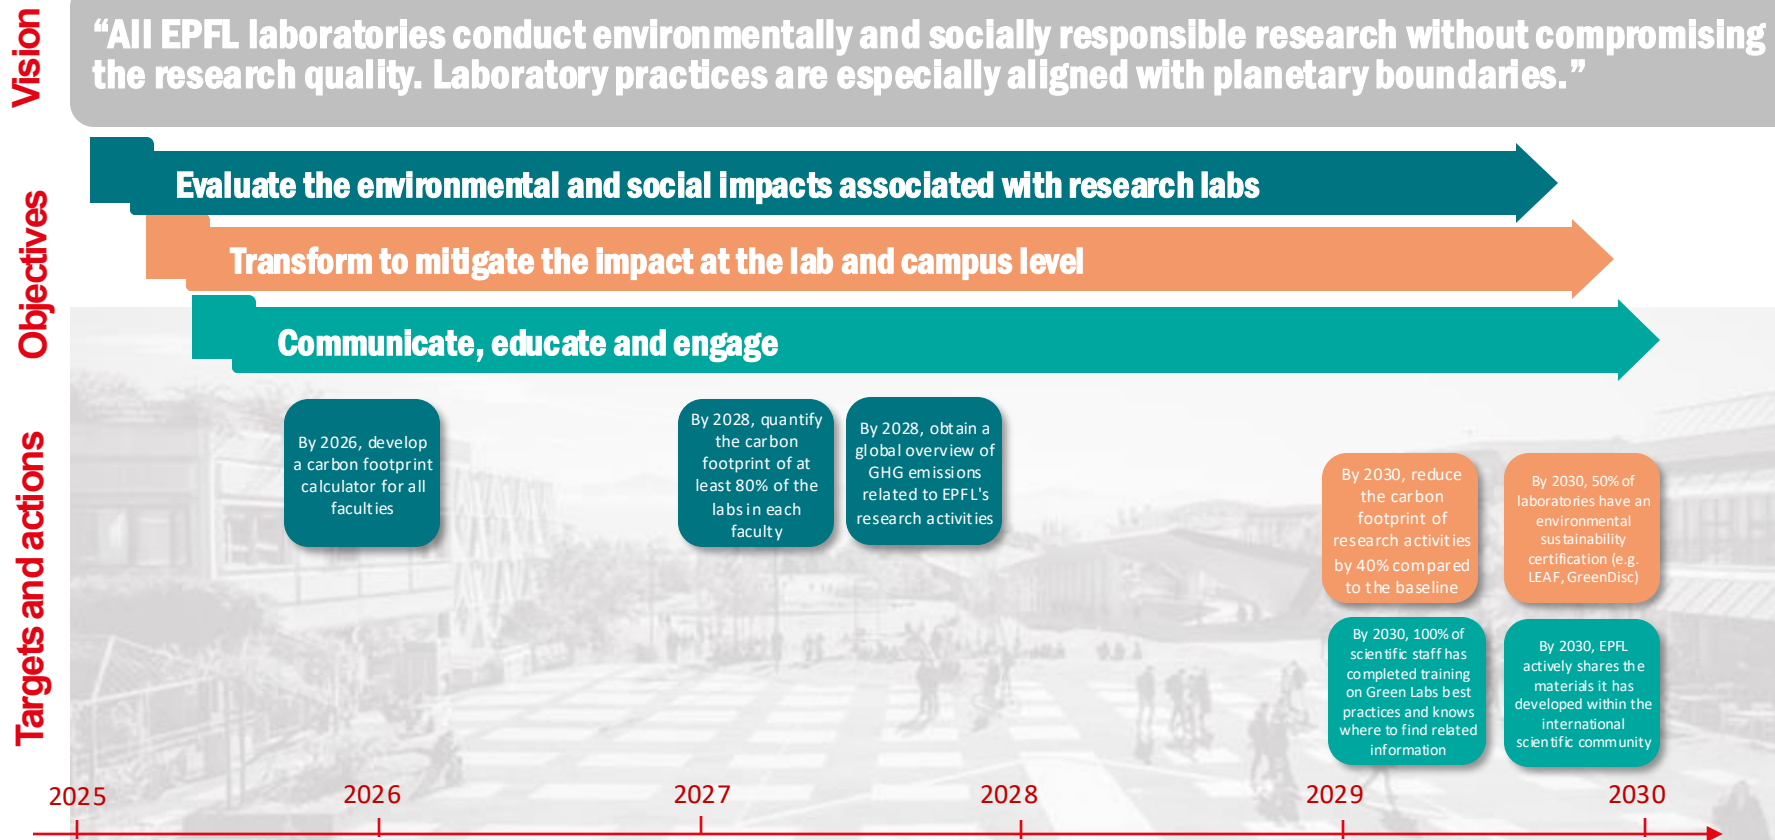

Assess: SML carbon footprint

Plan: action plan consolidation

Transform: key actions implementation

Next steps

# EPFL Green labs vision

My goal is to integrate the EPFL Green labs vision  
in the STI faculty

# Potential benefits of a lab environmental assessment

Cost reduction (e.g.  
in case of  
equipment  
mutualisation)

Innovation:  
integrating  
sustainability in  
research

Leadership among  
academic  
institutions

Requirement for a  
sustainability  
strategy to apply to  
some grants

Risk management

# Sustainability approach in STI

## ASSESS

Perform an **environmental footprint** (carbon and potentially other indicators such as water, plastic) at the lab or project scale following the GHG Protocol and ISO 14040 or 14044 standards

## PLAN

Co-development of an **action plan** and **strategy** with the research team, by identifying actions that have high environmental impact reduction and high feasibility, keeping in mind the associated cost

## TRANSFORM

**Action plan implementation** that can involve changes in lab operations, procurement, waste management, as well as stakeholder engagement and communication to the wider STI / EPFL community

High uncertainty

Others

## Hotspots equipment

Item	Quantity	Carbon footprint in t CO2 eq
Viscometer microVISC -L	1	5
Bench-Top Hei-VAP Expert Control	1	4
Elix® Essential 5 Kit SZ	2	3
Centrifuge	1	1
KDS Legato, cents 100, single syringe infusion pump, AC/DC input 100 - 240 V AC, EuroPlug (flat 2-pin)	2	1

## Hotspots consumables

Item	Quantity	Carbon footprint in t CO2 eq
Calibration kit Dextran, nominal Mp 180 - 225,000 Da	1	0.8
Aminex HPX-87H Column, 300 x 7.8 mm	1	0.5
Excalibur DÉSHYDRATEUR EXC10EL	1	0.4
PL aquagel-OH MIXED-H, 7.5 x 300 mm, 8 microm	1	0.4
Durapore(R) Membrane Filter, 0.65 microm	2	0.2

## Hotspots bio-chemicals

Item	Quantity	Carbon footprint in t CO2 eq
Aldrich(R) macro-micro KBr pellet die	1	0.4
Silicone oil, high temperature, usable temperature range: 25 to 250°C (open system) and 25 to 315°C, 2.5 kg	1	0.3
Galactomannan (Carob; Low Viscosity)	3	0.2
Xyloglucan (Tamarind)	3	0.2
Cholesterol Quantitation Kit	1	0.2

High uncertainty

Footprint of 1 laptop : ~ 200 kg CO<sub>2</sub>e

## Action levers

### Equipment

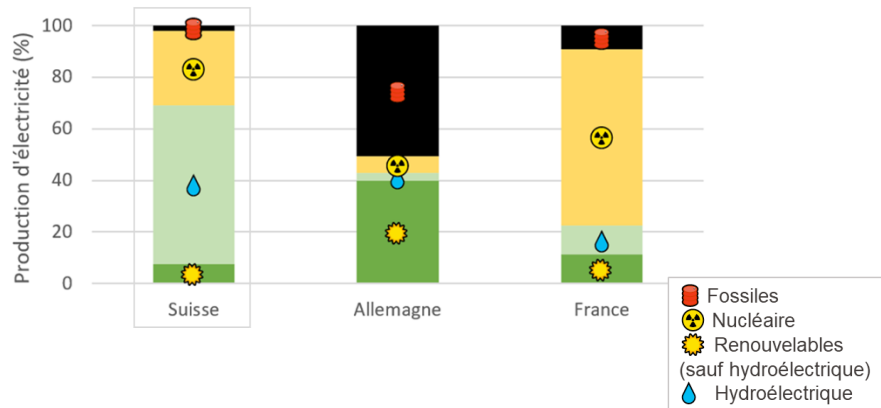

- In most lifecycles, manufacturing is the single largest source of impact.
- Acquire second-hand or refurbished equipment when possible.
- Consider sharing equipment with other labs.
- Extend the lifespan of existing equipment for as long as possible.
- Avoid unnecessary end-of-year purchasing.

### Consumables and biochemicals

- Spend time on experiment design.
- Ask around or use Catalyse to find out who you could borrow from before purchasing.
- Monitor expiration dates.

## Hotspots equipment electricity consumption

Item	Carbon footprint in t CO <sub>2</sub> eq
Epsilon 2-4 LSCplus	0.54
Pilot Microfluidizer® Processor	0.11
Tuttnauer Laboratory-Sterilizer 5075 ELC	0.09
Elix® Essential 5 Kit SZ	0.07
Elix® Essential 3 Kit SZ	0.07

## Action levers

- The share of electricity consumption in the overall carbon footprint can vary greatly depending on the lab's geographical location and corresponding electricity mix.

### Scientific equipment

- Turn off whenever possible and avoid leaving on standby mode.

### IT equipment

- Avoid leaving on standby mode.
- Organize an annual cleanout of large files that have become obsolete.

# Key takeaways

## PURCHASES

- Purchases contribute overall to **40%** of the SML carbon footprint
- **Equipment** is the largest contributor and manufacturing is often the life cycle stage that has the highest impact.
- Action levers to mitigate the **equipment purchase** carbon footprint are to **acquire second-hand or refurbished equipment** when possible, **consider sharing equipment** with other labs, **extend the lifespan** of existing equipment for as long as possible.
- Action levers to mitigate the **consumables and biochemicals purchase** carbon footprint are to spend time on experiment design, ask around or use Catalyse to find out who you could borrow from before purchasing and monitor expiration dates.

## PROFESSIONAL TRAVEL

- Professional travel contribute overall to **28%** of the SML carbon footprint
- Action levers to mitigate the professional travel carbon footprint are **take the train** to avoid flying within Europe, **use video-conferencing** or **local hub** options available rather than taking intercontinental flights, **choose economy** rather than business class if **avoid layovers** if flying.

## TRANSPORT AND DISTRIBUTION

- Transport and distribution contribute overall to **13%** of the SML carbon footprint
- Action levers to mitigate the transport and distribution carbon footprint are to make bulk purchases to optimize transportation and packaging for delivery.

# Q&A

## OUTLINE

General context

Sustainability in STI labs

Assess: SML carbon footprint

**Plan: action plan consolidation**

Transform: key actions implementation

Next steps

# Sustainability approach in STI

## ASSESS

Perform an **environmental footprint** (carbon and potentially other indicators such as water, plastic) at the lab or project scale following the GHG Protocol and ISO 14040 or 14044 standards

## PLAN

Co-development of an **action plan** and **strategy** with the research team, by identifying actions that have high environmental impact reduction and high feasibility, keeping in mind the associated cost

## TRANSFORM

**Action plan implementation** that can involve changes in lab operations, procurement, waste management, as well as stakeholder engagement and communication to the wider STI / EPFL community

## 1. PURCHASES, TRANSPORT AND DISTRIBUTION

- Which purchases can we improve? - greener supplier or model
- Sharing or selling excess equipment
- Which routine steps to check sustainability should we take when making a purchase (to move towards bulk purchases?)
- Are there reuse or recycling schemes from the suppliers? - ex containers, boxes etc?
- What consumables can we reduce or reuse?
- How can we extend IT equipment's lifespan?
- Can we use LEDs in research illumination? (not building lighting)

## 2. SUSTAINABLE LAB PRACTICES

- **Professional travel:** Can we reduce travel emissions and how ? What modes of transport can we use to avoid emissions linked to commuting?
- **Food:** How can we reduce my meat consumption? What are the best ways to consume more locally and regionally?
- **Electricity use:** What equipment/computers can be shut down or put on standby after use? What other energy efficiency measures can be taken?
- **Lab practices:** Shared protocols – standardised protocols that could be written and shared? Where could we share? Shared negative results and experimental improvements/optimisation – how? and where to share?

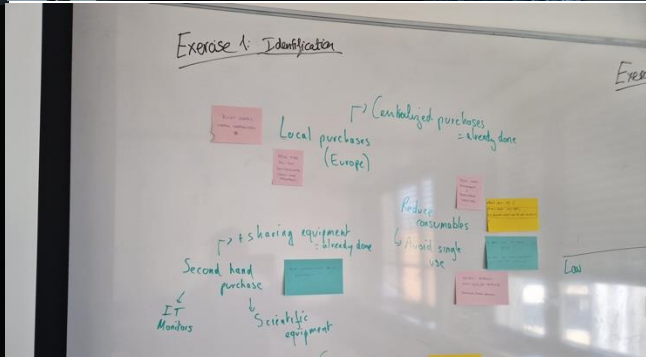

## Engagement rules

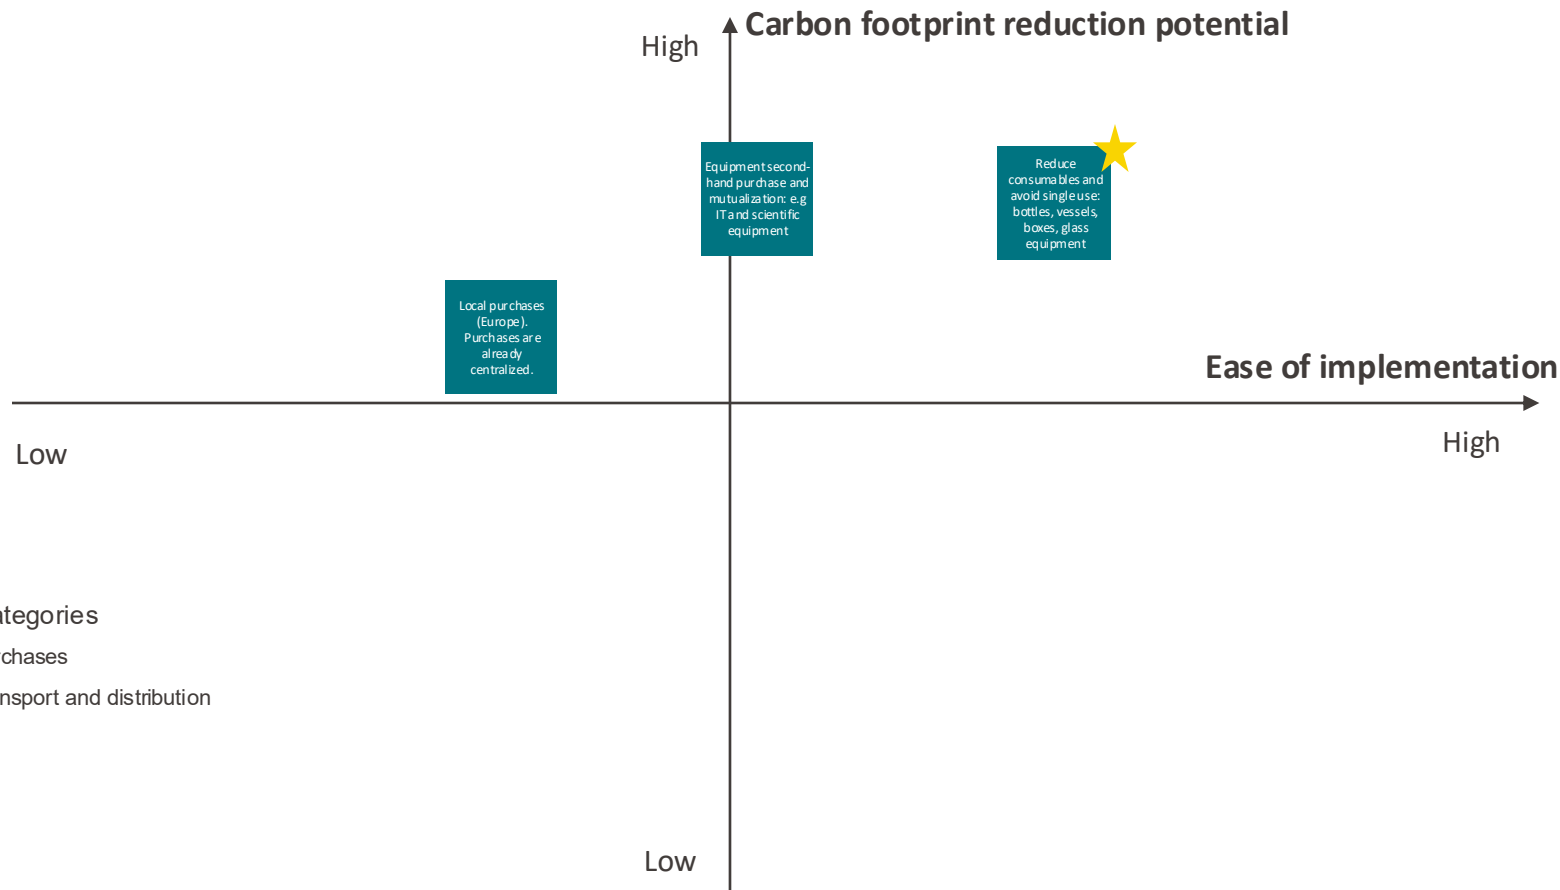

- Listen with attention
- Speak with intention
- Don't be afraid to ask questions

We are co-creating and are looking forward to your inputs 😊

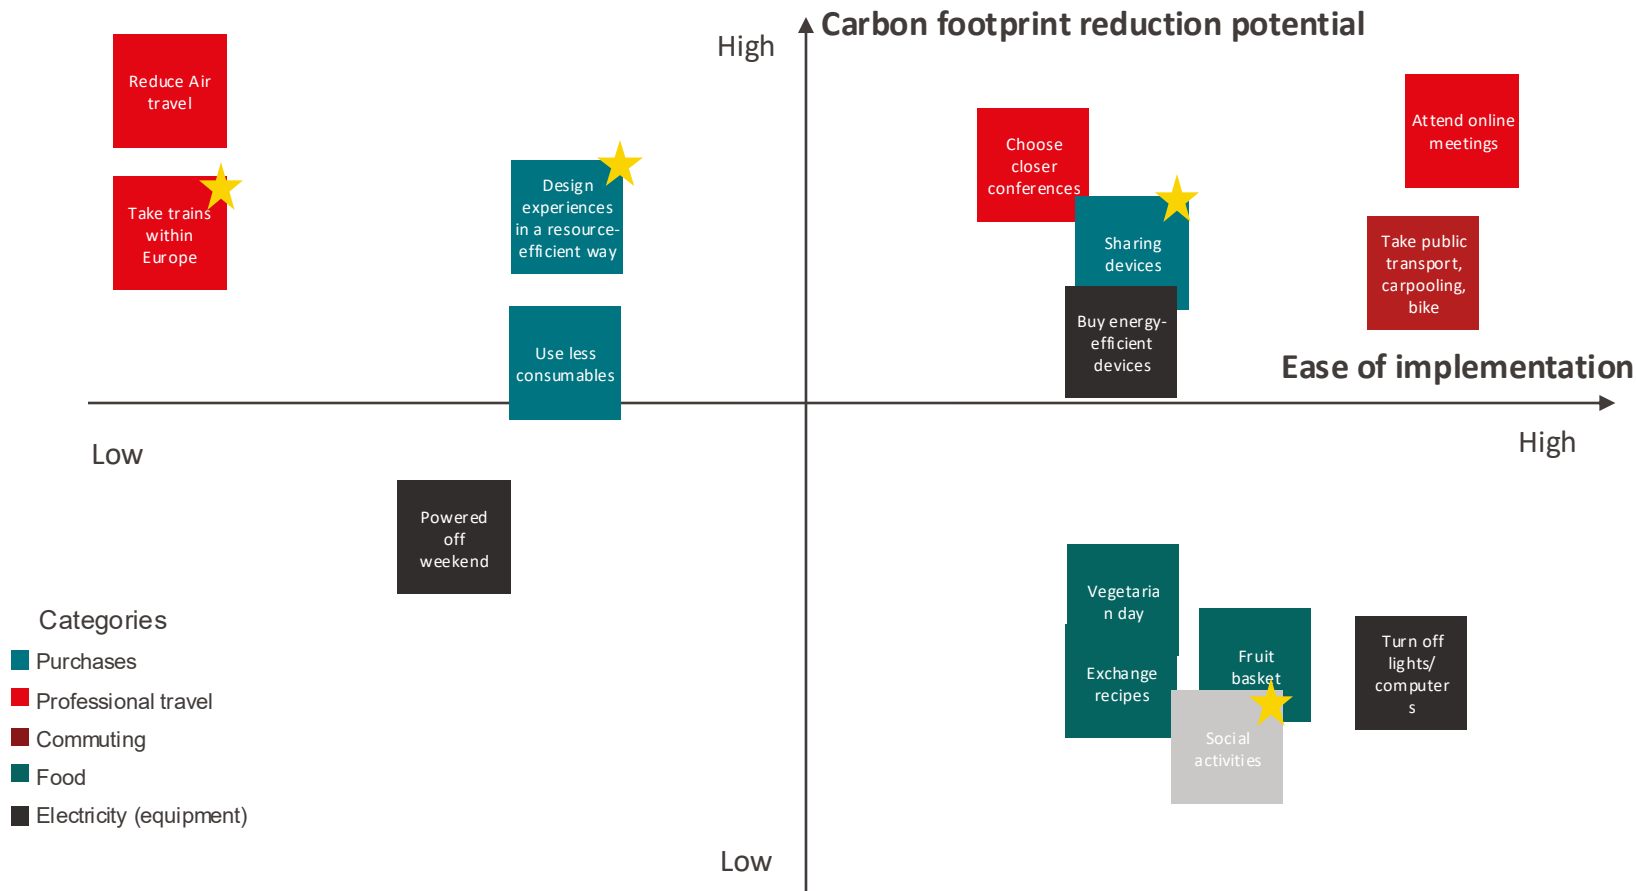

# PURCHASES, TRANSPORT AND DISTRIBUTION – group 1

# SUSTAINABLE LAB PRACTICES – group 2

# Q&A

## OUTLINE

General context

Sustainability in STI labs

Assess: SML carbon footprint

Plan: action plan consolidation

**Transform: key actions implementation**

Next steps

# Sustainability approach in STI

## ASSESS

Perform an **environmental footprint** (carbon and potentially other indicators such as water, plastic) at the lab or project scale following the GHG Protocol and ISO 14040 or 14044 standards

## PLAN

Co-development of an **action plan** and **strategy** with the research team, by identifying actions that have high environmental impact reduction and high feasibility, keeping in mind the associated cost

## TRANSFORM

**Action plan implementation** that can involves changes in lab operations, procurement, waste management, as well as stakeholder engagement and communication to the wider STI / EPFL community

# Actions can be taken at the individual, laboratory or faculty / institution level

## Action levels

### Examples of actions:

- **Individual level:** cycle to work, eat vegetarian food
- **Laboratory level:** centralize purchases, optimize the use of consumables, minimize waste
- **Faculty / Institution level:** set up a reuse platform, provide guidance for ventilation practices

We will first discuss actions that can be taken at the laboratory level.

## PURCHASES, TRANSPORT AND DISTRIBUTION

### ★ Reduce unnecessary purchases and avoid single use:

- Bottles, vessels, boxes, glass equipment

### ★ Equipment second-hand purchase and mutualization:

- e.g. IT and scientific equipment

### Local suppliers

- Identify European suppliers

## SUSTAINABLE LAB PRACTICES

### ★ Design experiences in a resource-efficient way

### ★ Professional travel

- Take trains within Europe

### ★ Office life

- Fruit basket
- Social activities

## Reduce unnecessary purchases and avoid single use CHIARA

- Identify top 3 consumables use in terms of cost / volume
- For each consumable define an alternative option and a process to put it into place
- Organize a group presentation on alternative consumable choices
- Write a short document with best practices for consumable use, that can be printed as a poster in the lab, used in an on-boarding kit, etc.

## Design experiments in a resource-efficient way INYOUNG

- Discuss options for experimental design optimization
- Come up with a document that provides guidance on how to plan experiments, that can be printed as a poster in the lab, used in an on-boarding kit, etc.

## Office life (fruit basket, social activities, etc.) BLANCA

- **Order a weekly fruit baskets**
- Create a social committee with sustainability as one topic to be considered
- Organise a social lunch on the topic of vegetarian cooking
- Organize an apéro to discover local beer

## Equipment second-hand purchase and mutualization

- Pilot to use the EPFL reuse platform (Anna can keep you updated when the platform is available)

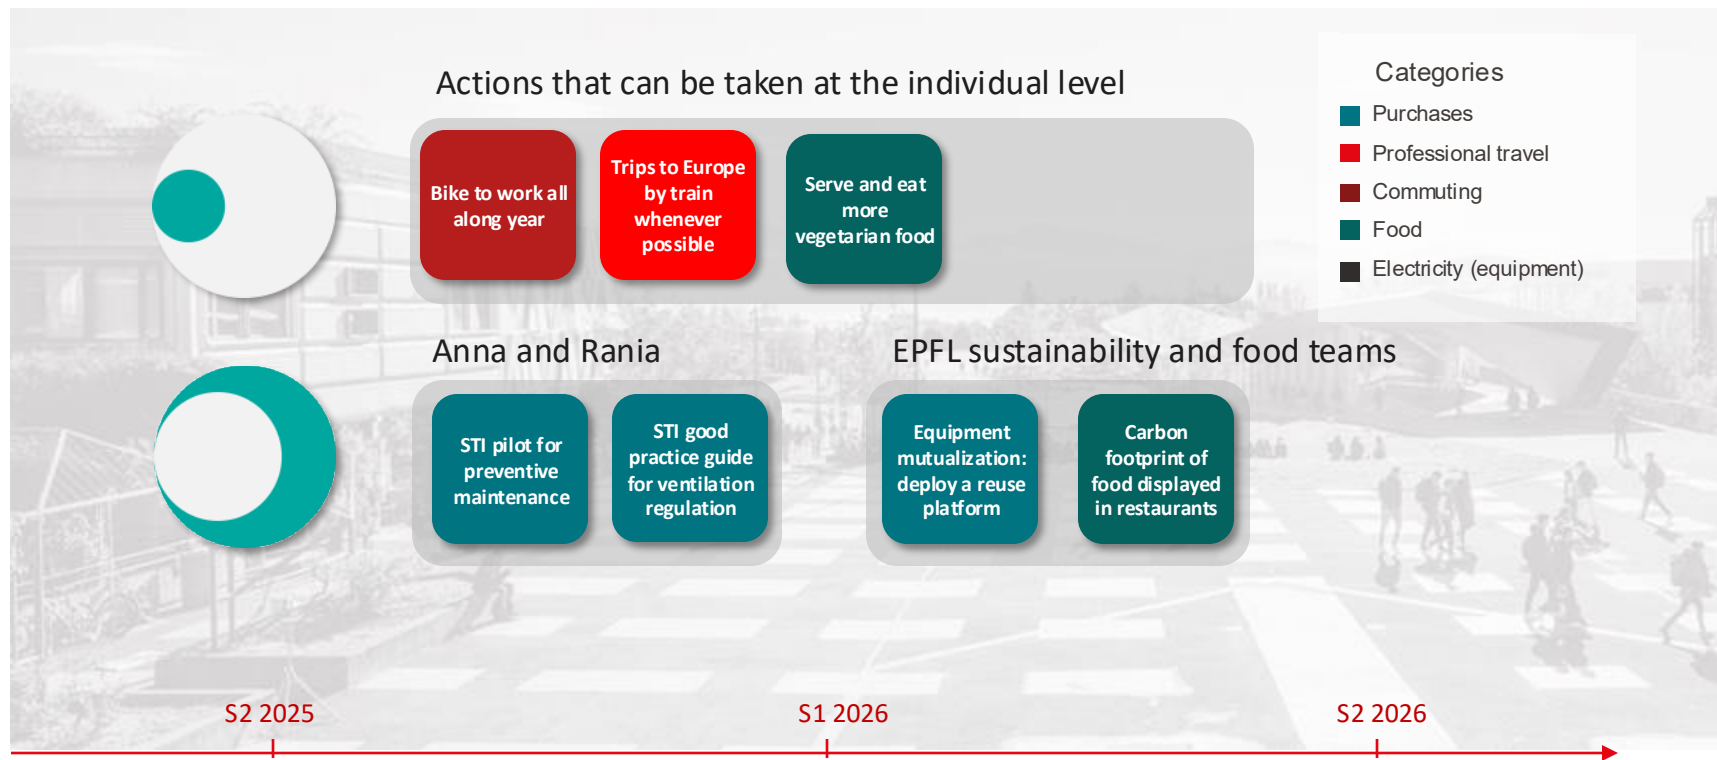

## Local and sustainable suppliers

- Identify top 3 products purchased
- Identify choice of supplier for each purchase
- Assess each supplier against a set of criteria, including cost, location, level of maturity in terms of environmental sustainability
- Write a short document with best practices for sustainable purchases, that can be printed as a poster in the lab, used in an on-boarding kit, etc.
